

# Actions Needed to Move Forward

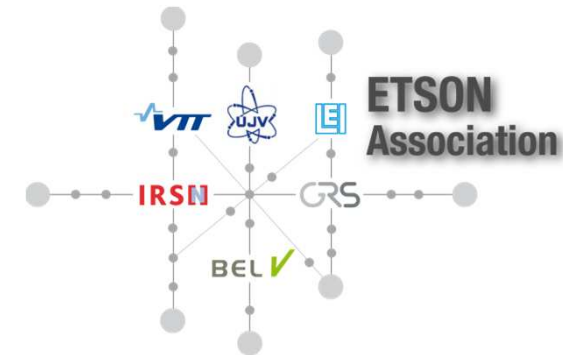

Hans Steinhauer, Director General, GRS  
Board Member, ETSON

## Actions Needed to Move Forward

- Enhanced interaction within regional TSO networks
- Extension of global outreach
- Focus of technical cooperation

## Enhanced interaction within regional TSO networks

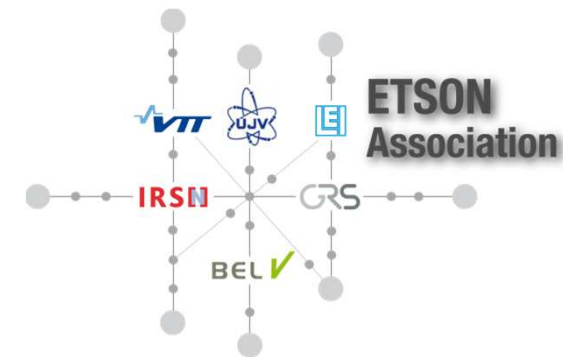

- Effective legal and contractual frameworks
- Efficient modes of interaction and cooperation
- Functional internal coordination
- Consistent external appearance

### Proposal:

The IAEA could develop an IRRS concept for TSOs and also for TSO networks. This could be done by setting up a respective working group with representatives from TSOs, networks and regulators, coordinated by the IAEA.

## Extension of global outreach

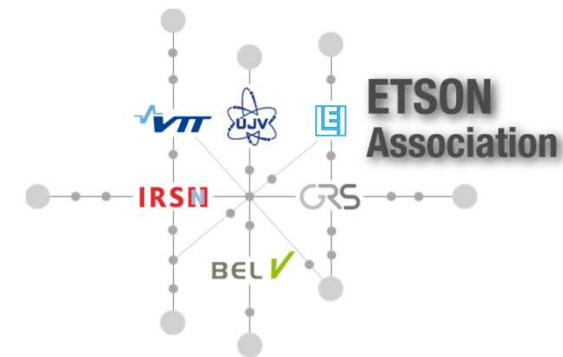

- Contact to other networks and TSOs (e.g. ETSON to ANSN and JNES)
- Identification of areas of common interest
- Evaluation of TSO performance
- Establishment of Codes of Conduct

### Proposal:

The objective of the aforementioned actions should be the establishment of a global TSO forum. The IAEA should support and coordinate these efforts. The next conference could be a good occasion to set up such a global TSO forum.

## Focus of technical cooperation

- Harmonization of nuclear safety,
- Enhancement of contributions to R&D programs and to GNSSN
- Consolidation of shared training and tutoring

### Proposal:

These efforts have potential benefits for newcomer states. The IAEA could integrate these activities into a comprehensive concept to support newcomer states in building up their own TSO capabilities.
