Acronym LASAIR

LASAIR

Programme for the Lagrange-Simulation
of the dispersion (*German: Ausbreitung*)
and Inhalation of Radionuclides

Lagrange := meteorological mathematical procedure

LASAIR background: Effects after a „dirty-bomb“ explosion

LASAIR model descriptions

- **2-dimensional flow model (no orographic structure)**
- **type of model: Lagrange particle model (60.000 particles)**
- **individual characterisation of the roughness length**
- **5 radionuclides can be computed simultaneously**
- **approx. 860 radionuclides available**
- **very quick response time (1 – 10 minutes)**

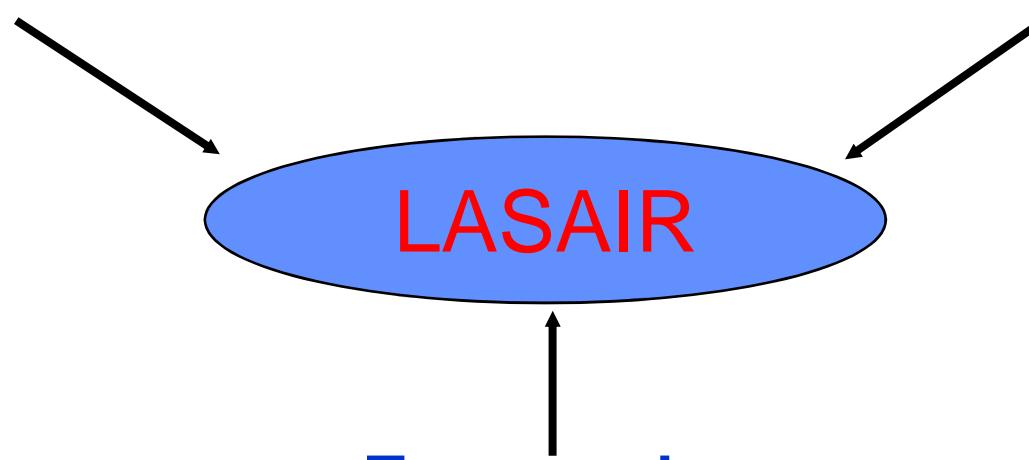

LASAIR input

Meteorology

- wind speed
- wind direction
- stability class

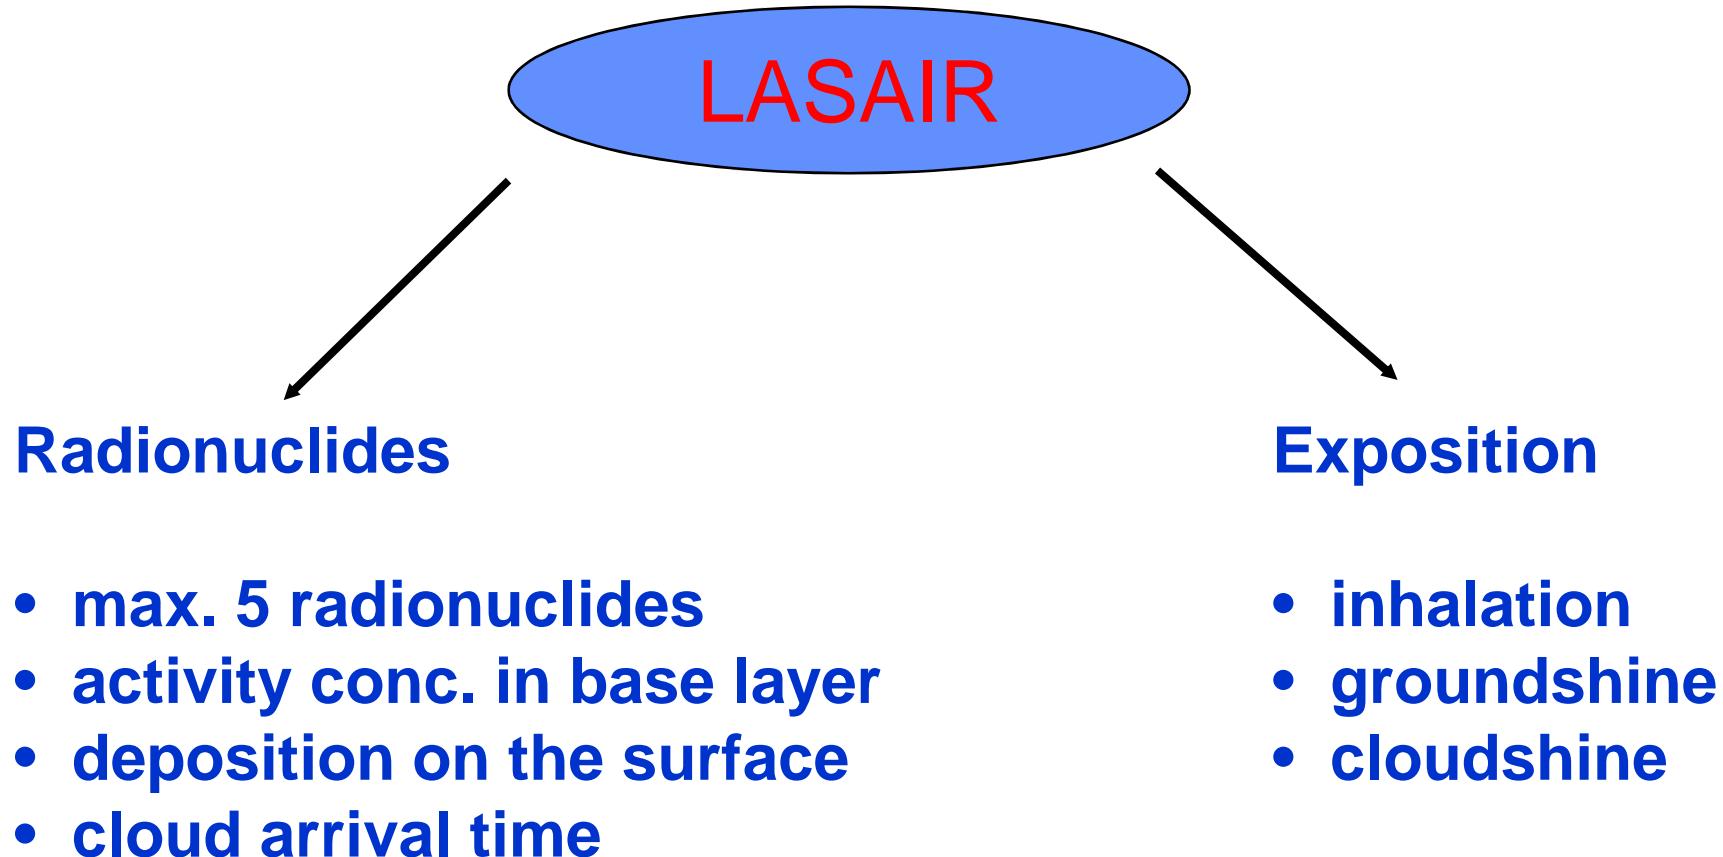

Release to the atmosphere

- short term release
- or
- continuous release

- ## Topography
- individual roughness length
 - 2 dimensional simulation

LASAIR output

LASAIR deposition computation

- computation

$$D_r = V_g \cdot C^*_{Lu,r}$$

D_r	deposition of nuclide r	[Bq m ⁻²]
V_g	deposition velocity	[m / sec]
$C^*_{Lu,r}$	time-integrated activity in air	[Bq min m ⁻³]

LASAIR deposition velocities and size range

- **deposition velocities**

Suggested values for aerosol diameters and deposition velocities for the short-range scenario
[Kasper & Govert, email Kathy 02.08.2010]

Size range (μm)	Average diameter (μm)	Deposition velocity (10^{-4} m/s)
< 0.39	0.2	0.5
0.39 - 1.3	1	1.5
1.3 - 10.2	8	10
> 10.2	20	80

LASAIR values for deposition velocities for the short-range scenario (standard values in brackets)

Size range (μm)	Deposition velocity (10^{-4} m/s)
0 – 2,5	1 (10)
2,5 – 10	10 (100)
10 -50	80 (500)
> 50	80 (2000)

LASAIR deposition velocities and size range

- size range for aerosols in LASAIR spectral distribution

Size range (μm)	Percentage %
0 – 2,5	40
2,5 – 10	40
10 -50	10
> 50	10
	100

LASAIR integrated activity computation

- computation

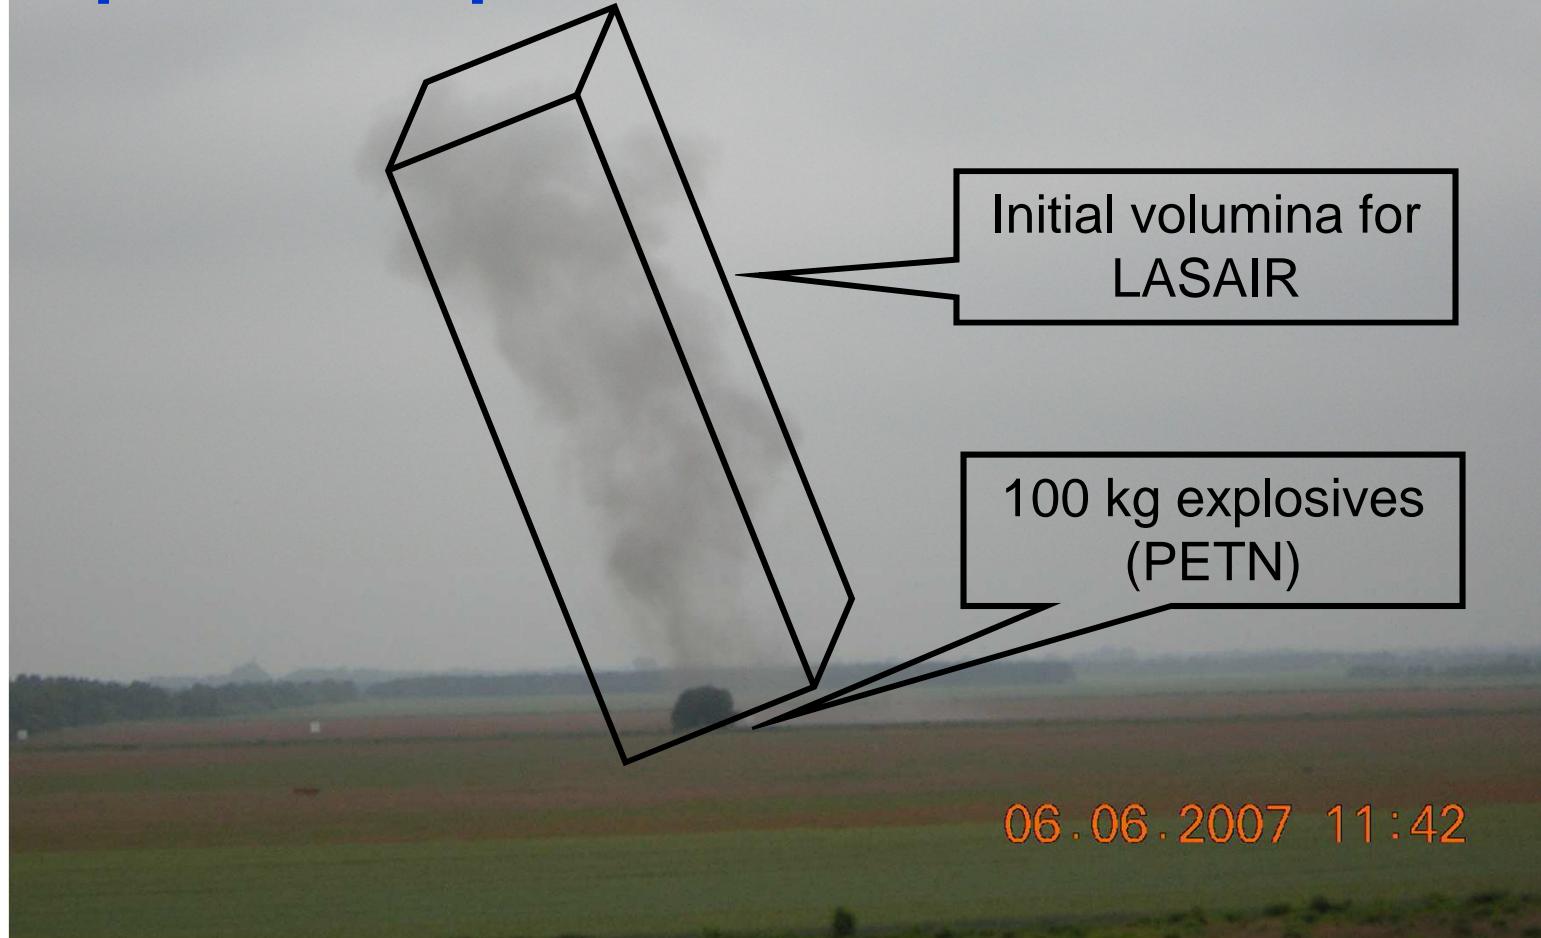

$$C^*_{Lu,r} = C_{Lu,r} \cdot T$$

$C^*_{Lu,r}$	time-integrated activity in air	[Bq min m ⁻³]
$C_{Lu,r}$	activity in air	[Bq m ⁻³]
T	time period	[min]

LASAIR special feature

- parameterisation of the individual cloud as initial volumina (LASAIR source term)

Initial cloud volumina, explosive experiments 2003 / 2007

Comparison of the initial volume

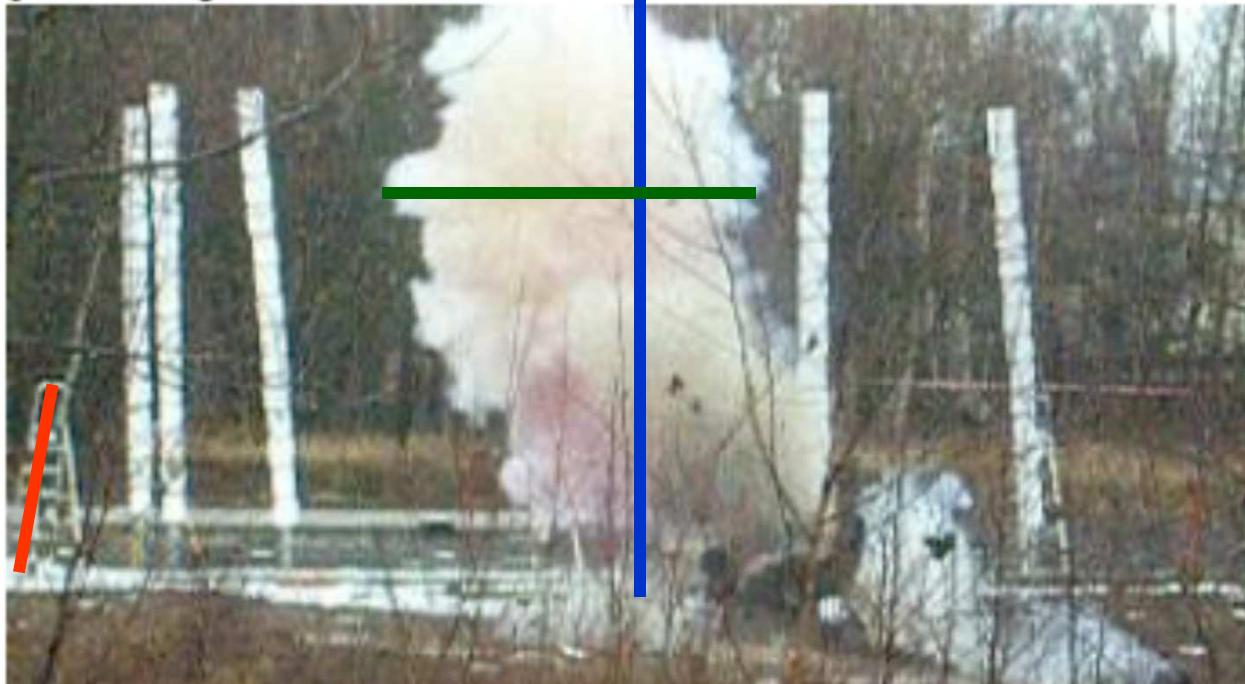

The diagram shows three stepladders of different heights. Ladder A is the tallest, ladder B is in the middle, and ladder C is the shortest. Red vertical lines indicate the height from the ground to the top of each ladder, corresponding to the values in the table below.

Certification logos for TÜV SÜD and GS (geprüfte Sicherheit) are displayed, indicating compliance with EN 131 standards.

Arbeitshöhe bis ca. m A	2,65	2,85	3,05	3,25	3,50	3,75
Standhöhe ca. m B	0,65	0,85	1,05	1,25	1,50	1,75
Gesamtlänge ca. m C	1,45	1,65	1,85	2,05	2,25	2,45
Stufenzahl	3	4	5	6	7	8
Gewicht ca. kg	3,0	3,6	4,5	5,2	6,2	7,2
Transportmaße	Länge ca. m					
Breite ca. m	0,41	0,44	0,46	0,49	0,52	0,54
Höhe ca. m	0,13	0,13	0,13	0,13	0,13	0,13
Art.-No.	120212	120274	120281	120298	120304	120311

Comparison of the initial volume

3

Test 1, 2007/12/06, picture 3

$$h = 2,48 \text{ cm} \\ \text{equates to } 1,85 \text{ m}$$

$$h = 8,34 \text{ cm} \Rightarrow \\ 8,34 / 2,48 * 1,85 \text{ m}$$

$$\hat{=} \underline{\underline{6,2 \text{ m}}}$$

$$w = 4,94 \text{ cm} \Rightarrow \\ 4,94 / 2,48 * 1,85 \text{ m}$$

$$\hat{=} \underline{\underline{3,7 \text{ m}}}$$

Comparison of the initial volume

4 Test 2, 2008/05/15, picture 4

$h = 2.89 \text{ cm}$ equates to 1.85 m

$$h = 8.15 \text{ cm} \Rightarrow 8.15 / 2.89 * 1.85 \text{ m}$$

$\hat{=} \underline{5.2 \text{ m}}$

$$w = 3.6 \text{ cm} \Rightarrow 3.6 / 2.89 * 1.85 \text{ m}$$

$\hat{=} \underline{2.3 \text{ m}}$

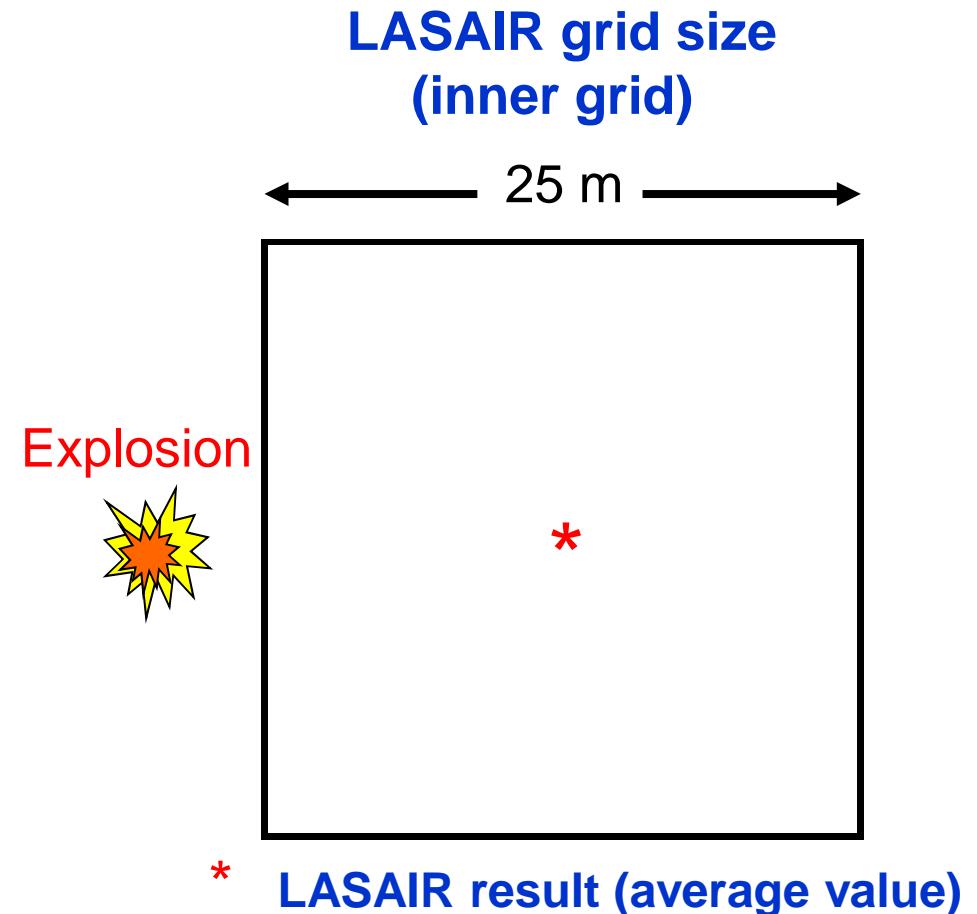

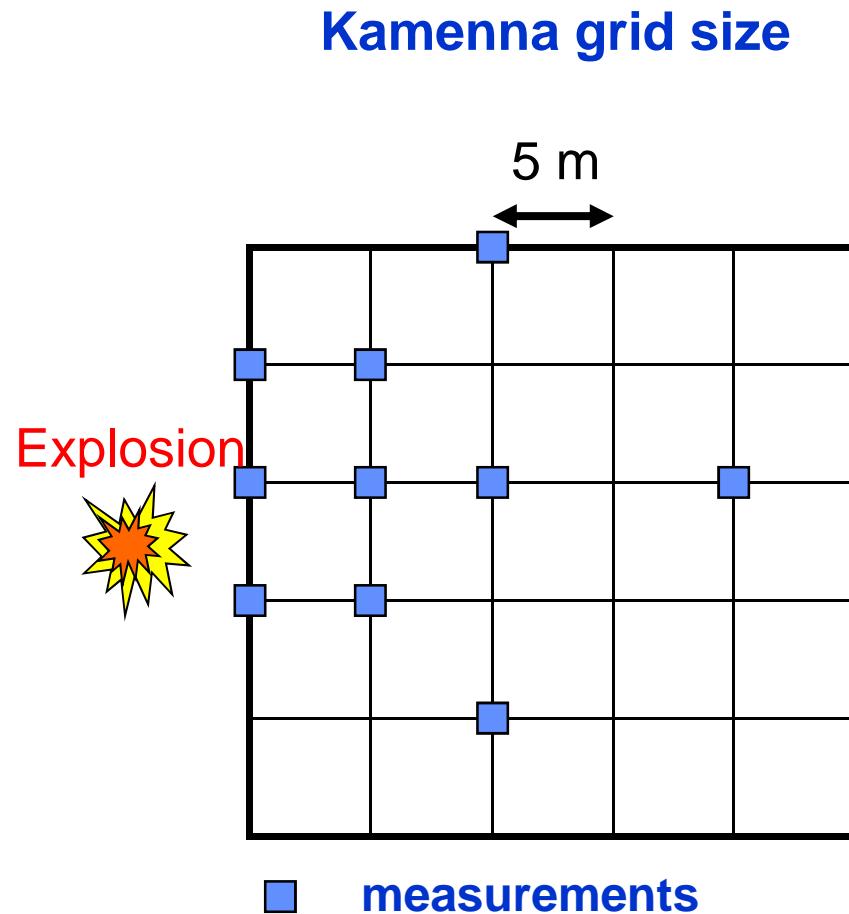

Comparison of the initial volume

Suggestion from Dejan / Hartmut / LASAIR formula

		Test 1 suggested	used	Test 2 suggested	used	Test 3 suggested	used	Test 4 suggested	used
Cloud height	m	7 / 6,2 / 8	7	5 / 5,2 / 4	5	12,9 /n.a./ 18	13	12,9 /n.a./ 18	13
Cloud base	m	2,8 / 3,7 / 5	3	2 / 2,3 / 3	2	5,2 /n.a. / 12	5	5,2 /n.a. / 12	5

LASAIR results for „Kamenna-Experiments“

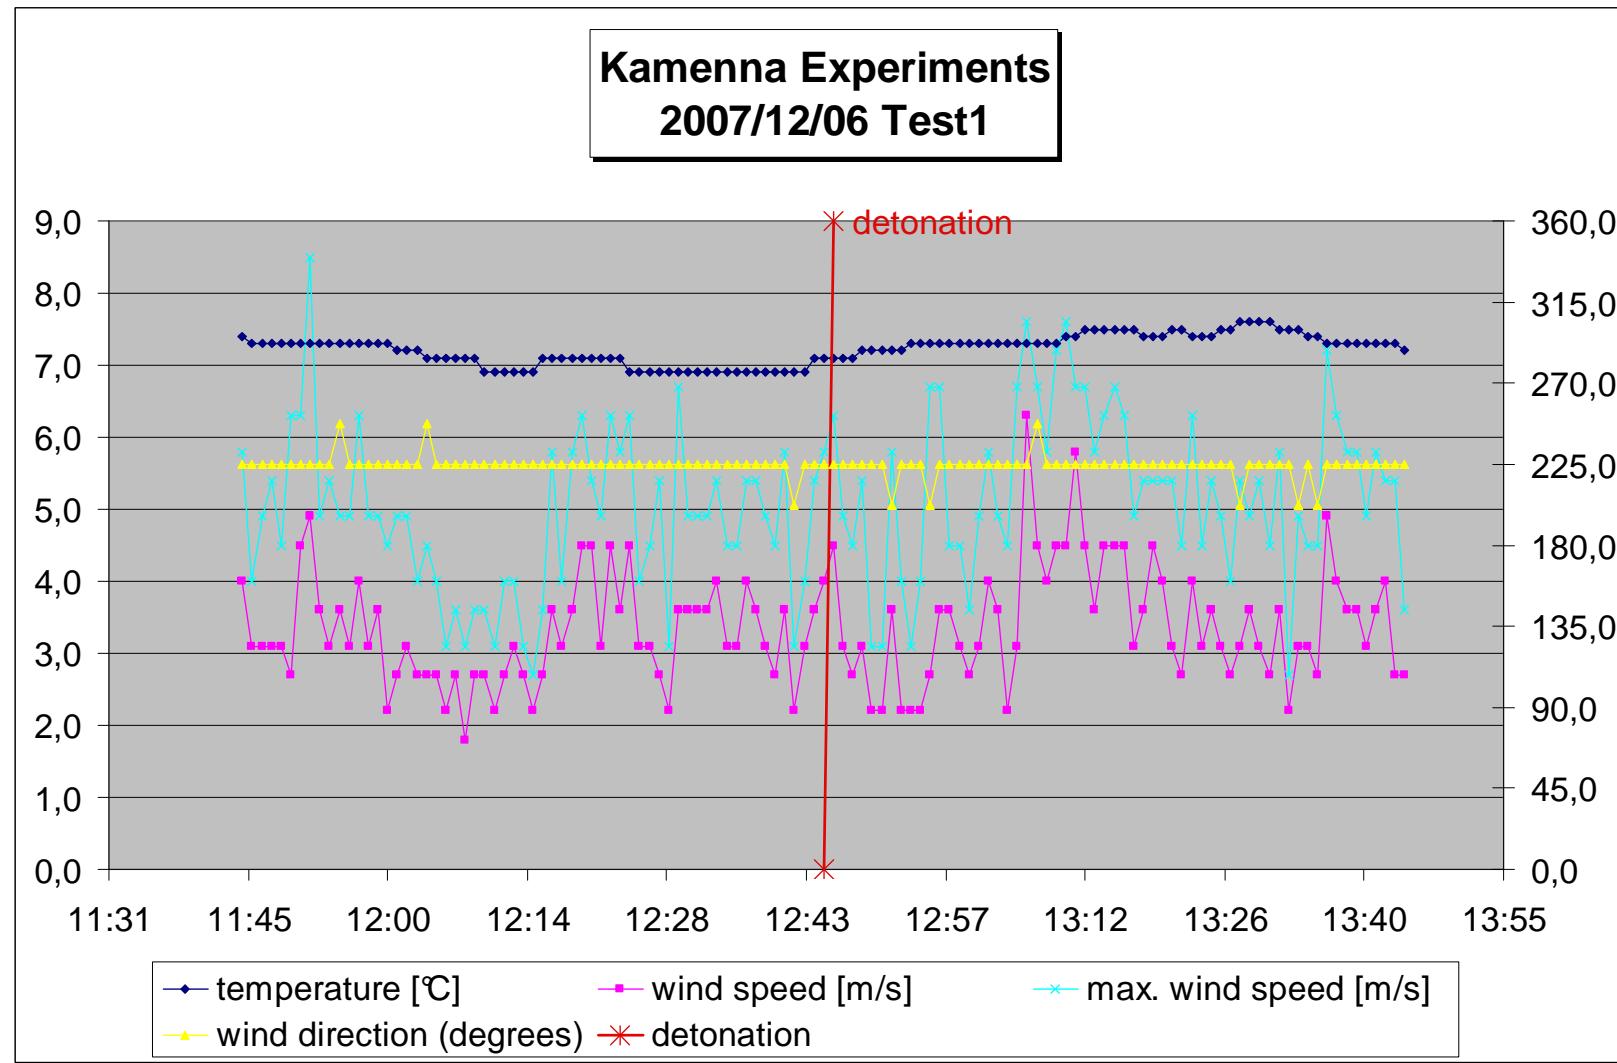

**Comparison of field and model data
for time-integrated activity,
maxima downwind and
deposition**

results from LASAIR

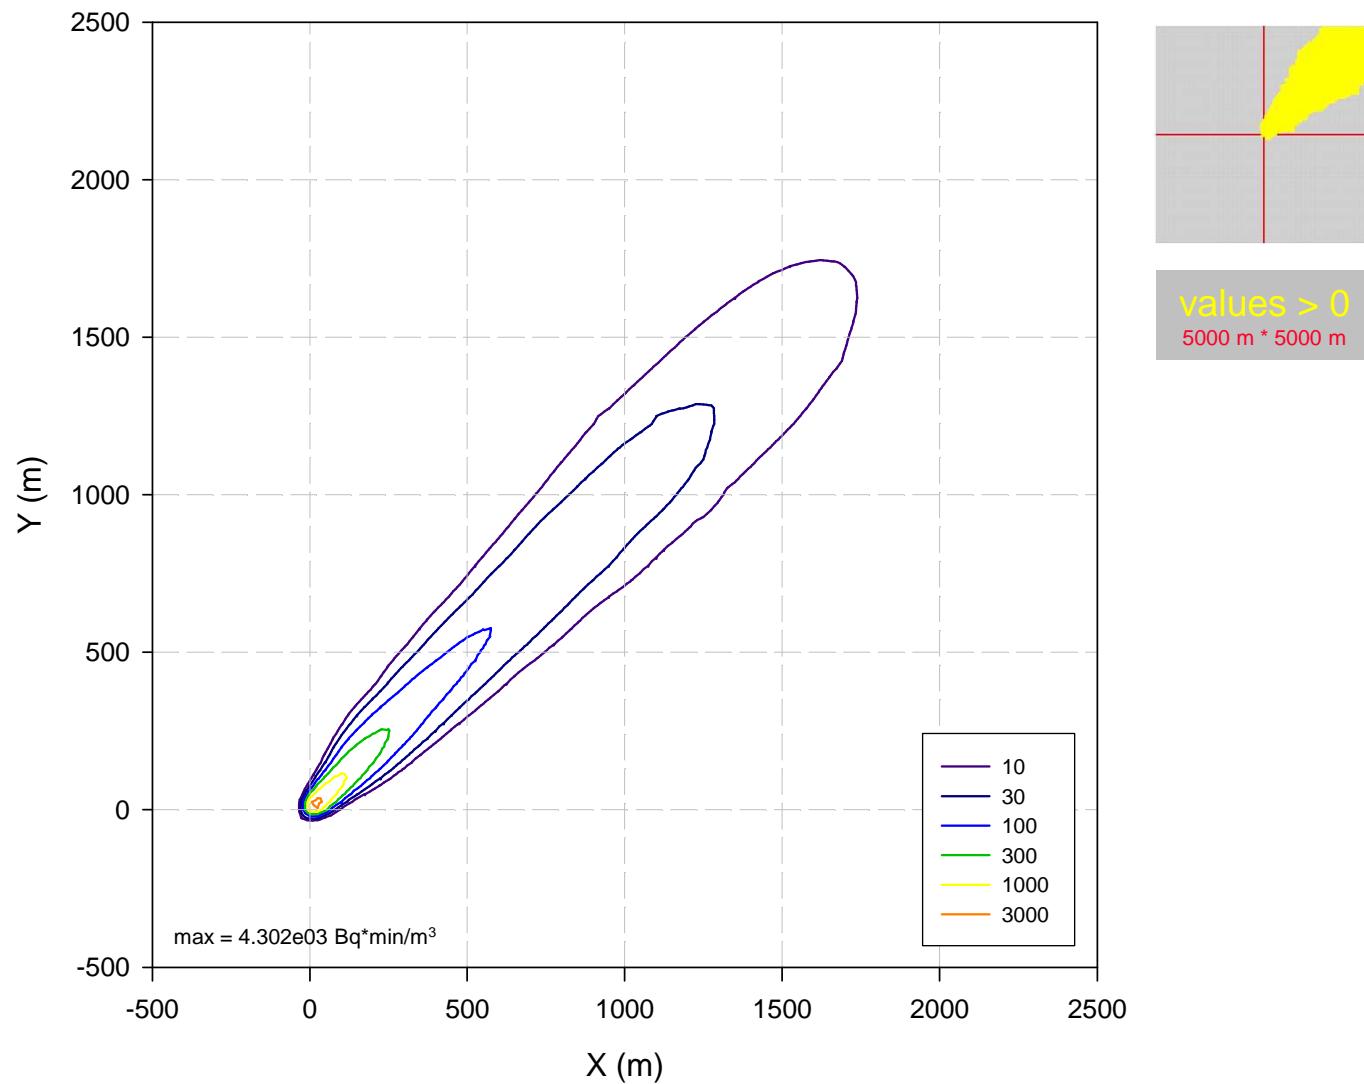

Hartmut Walter
Federal Office for Radiation Protection, Germany

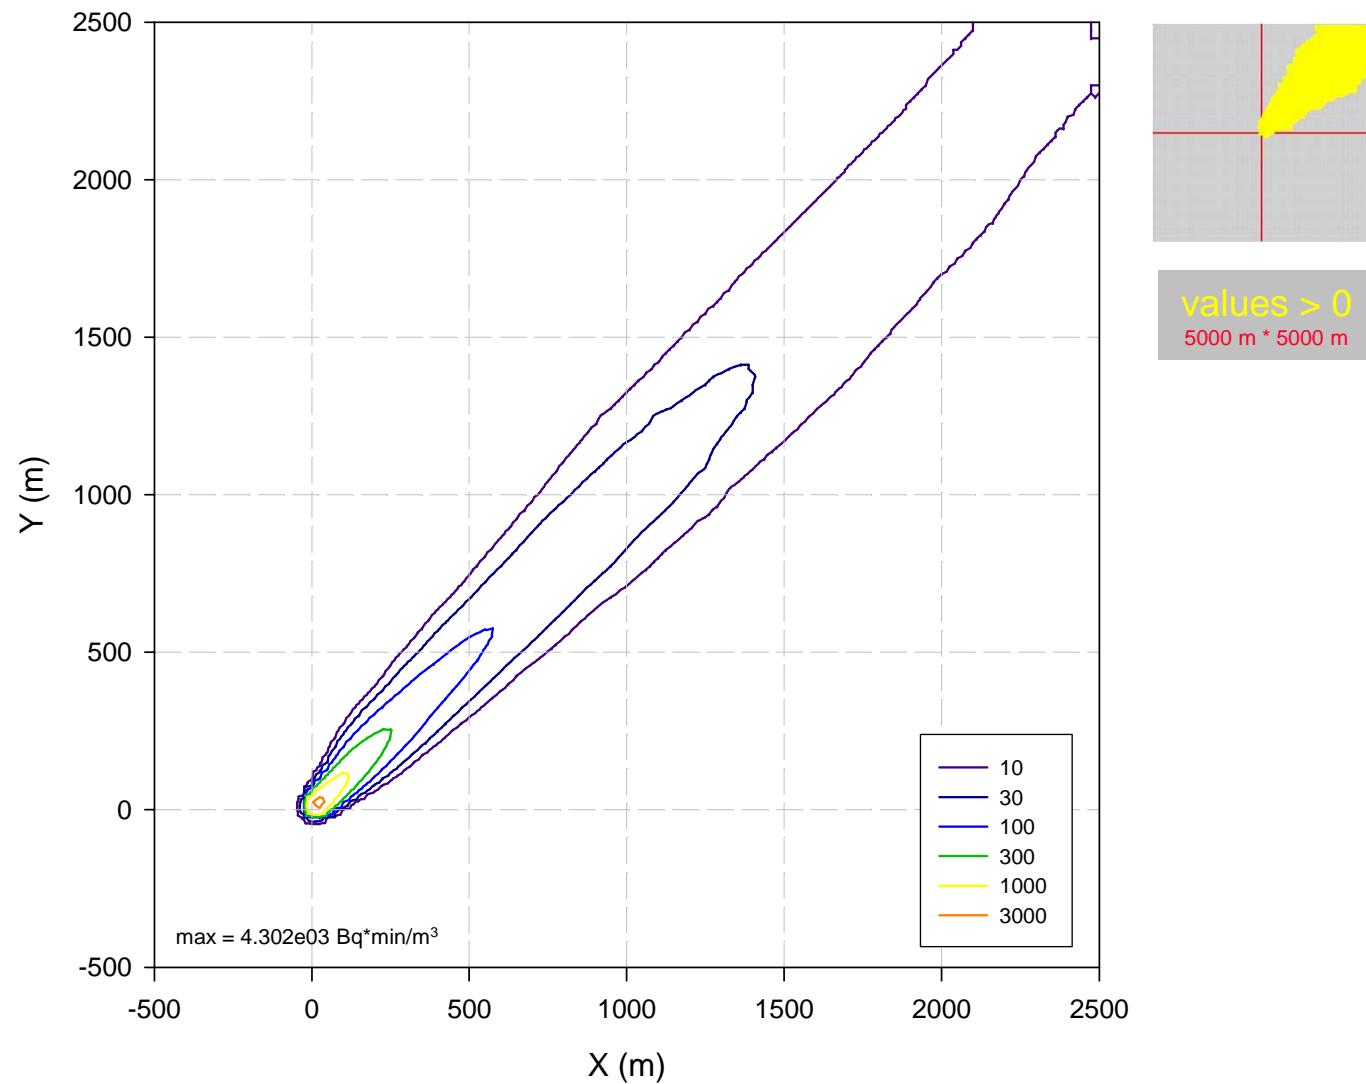

Meteorology Test 1

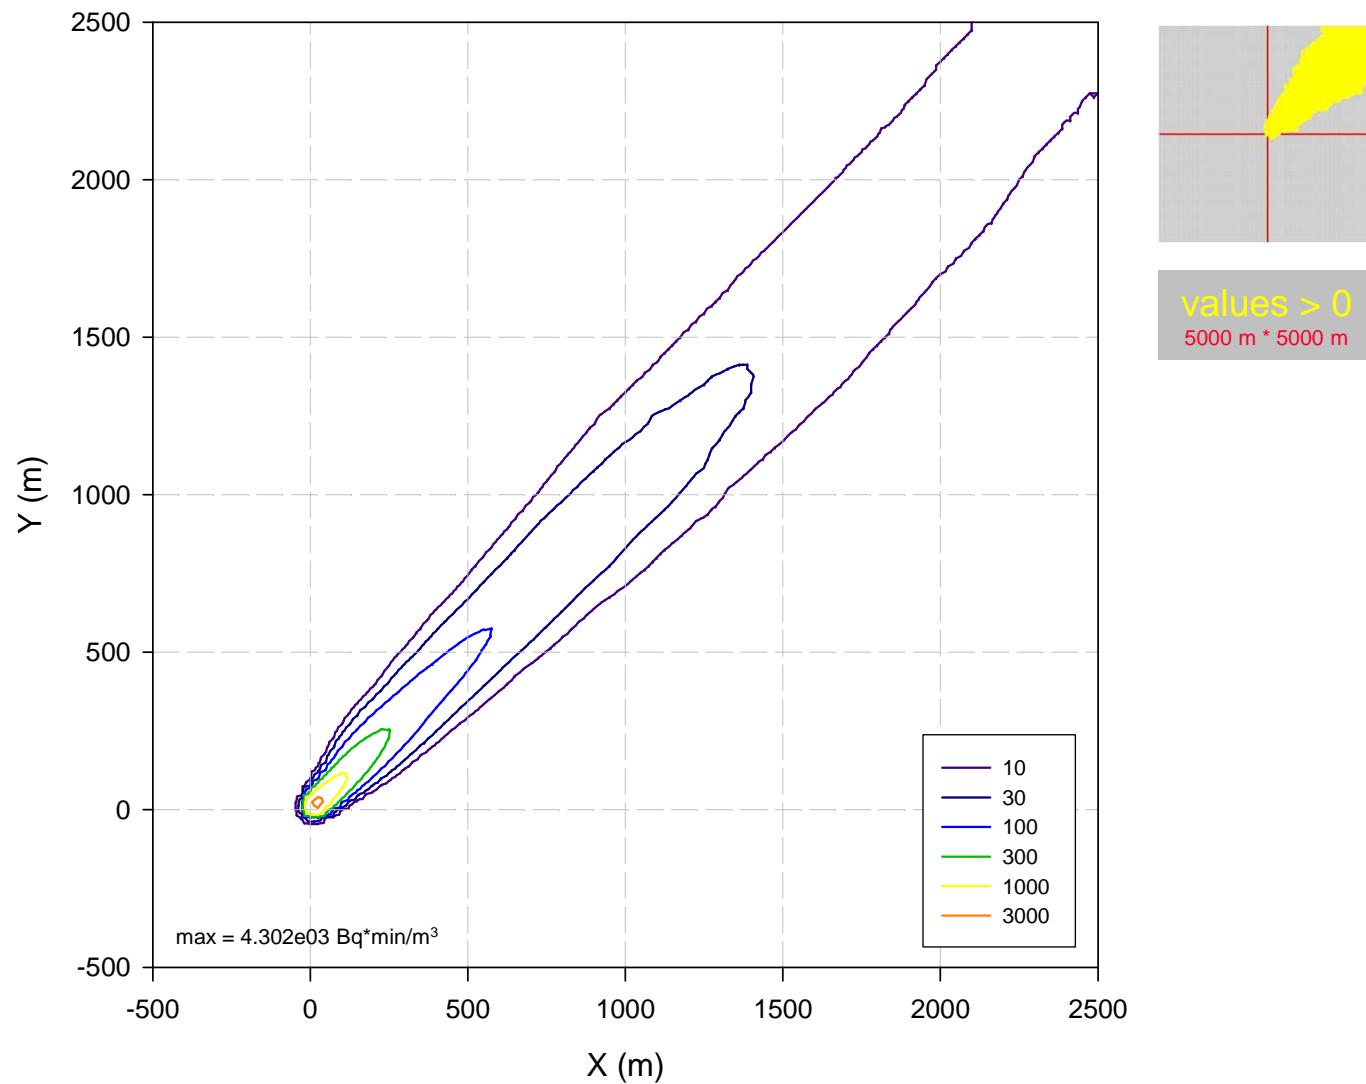

Experiment 1, time integrated activity [Bq*min/m³], 05 min

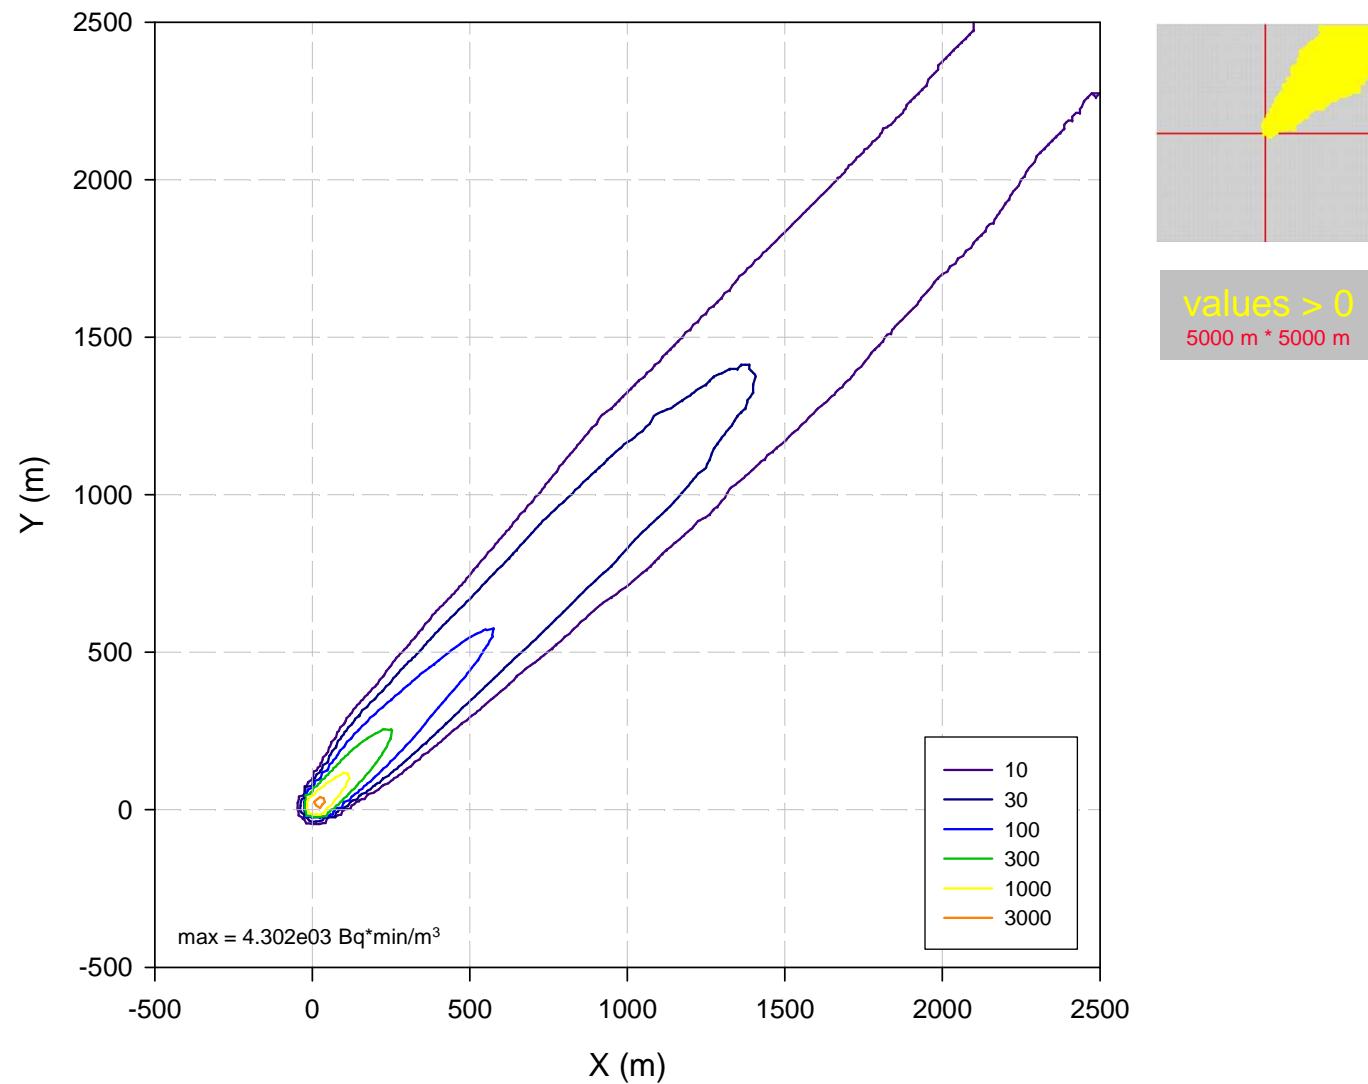

Experiment 1, time integrated activity [Bq*min/m³], 10 min

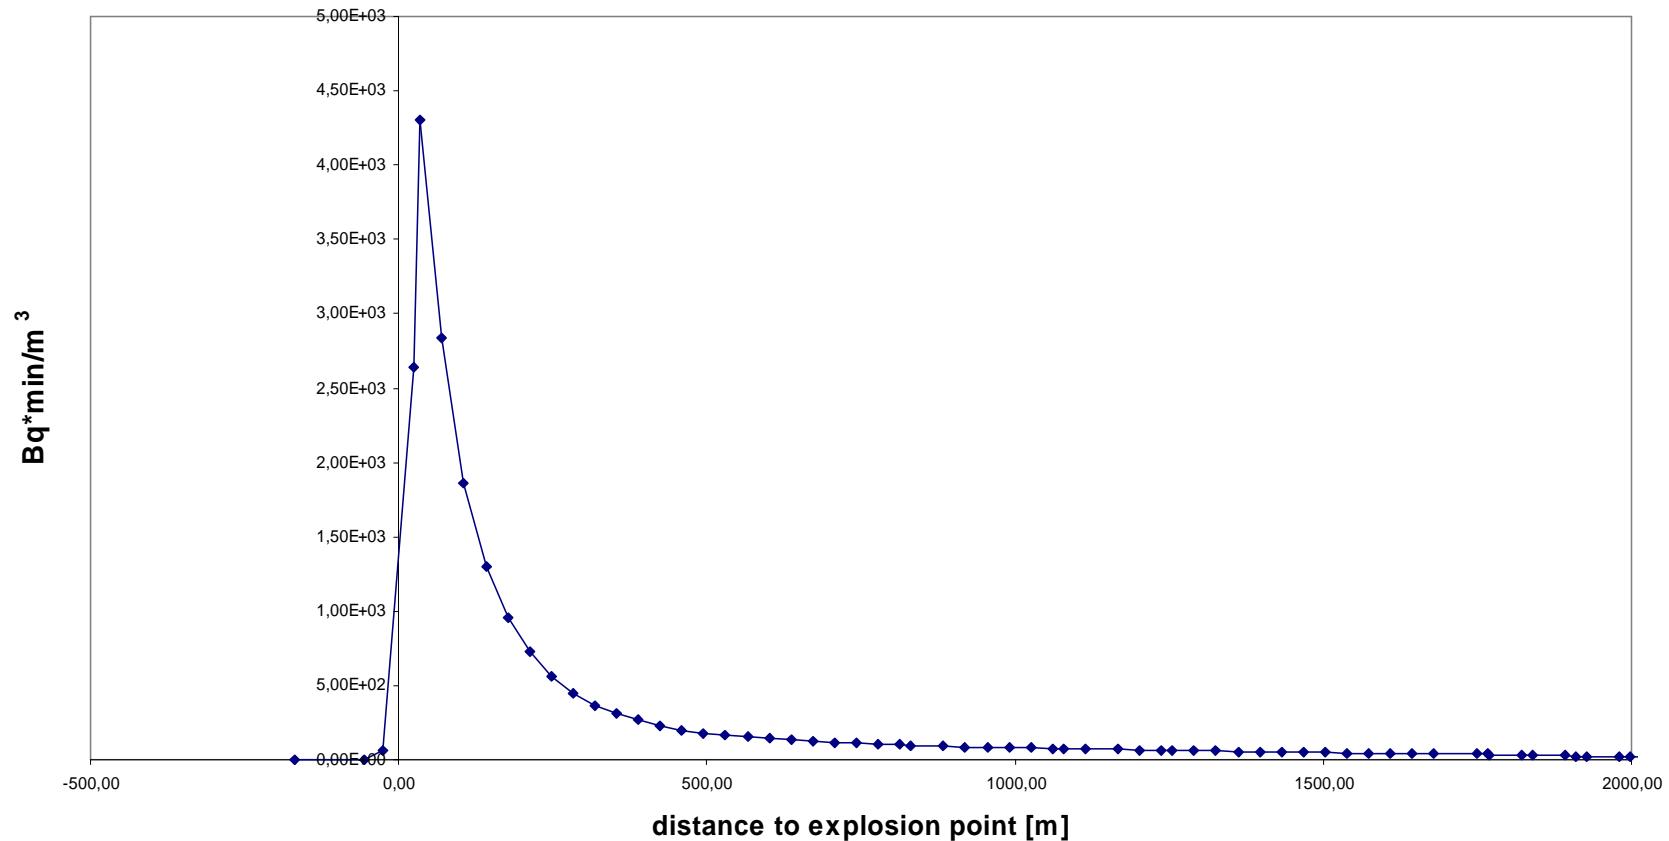

Experiment 1, time integrated activity [Bq*min/m³], 15 min

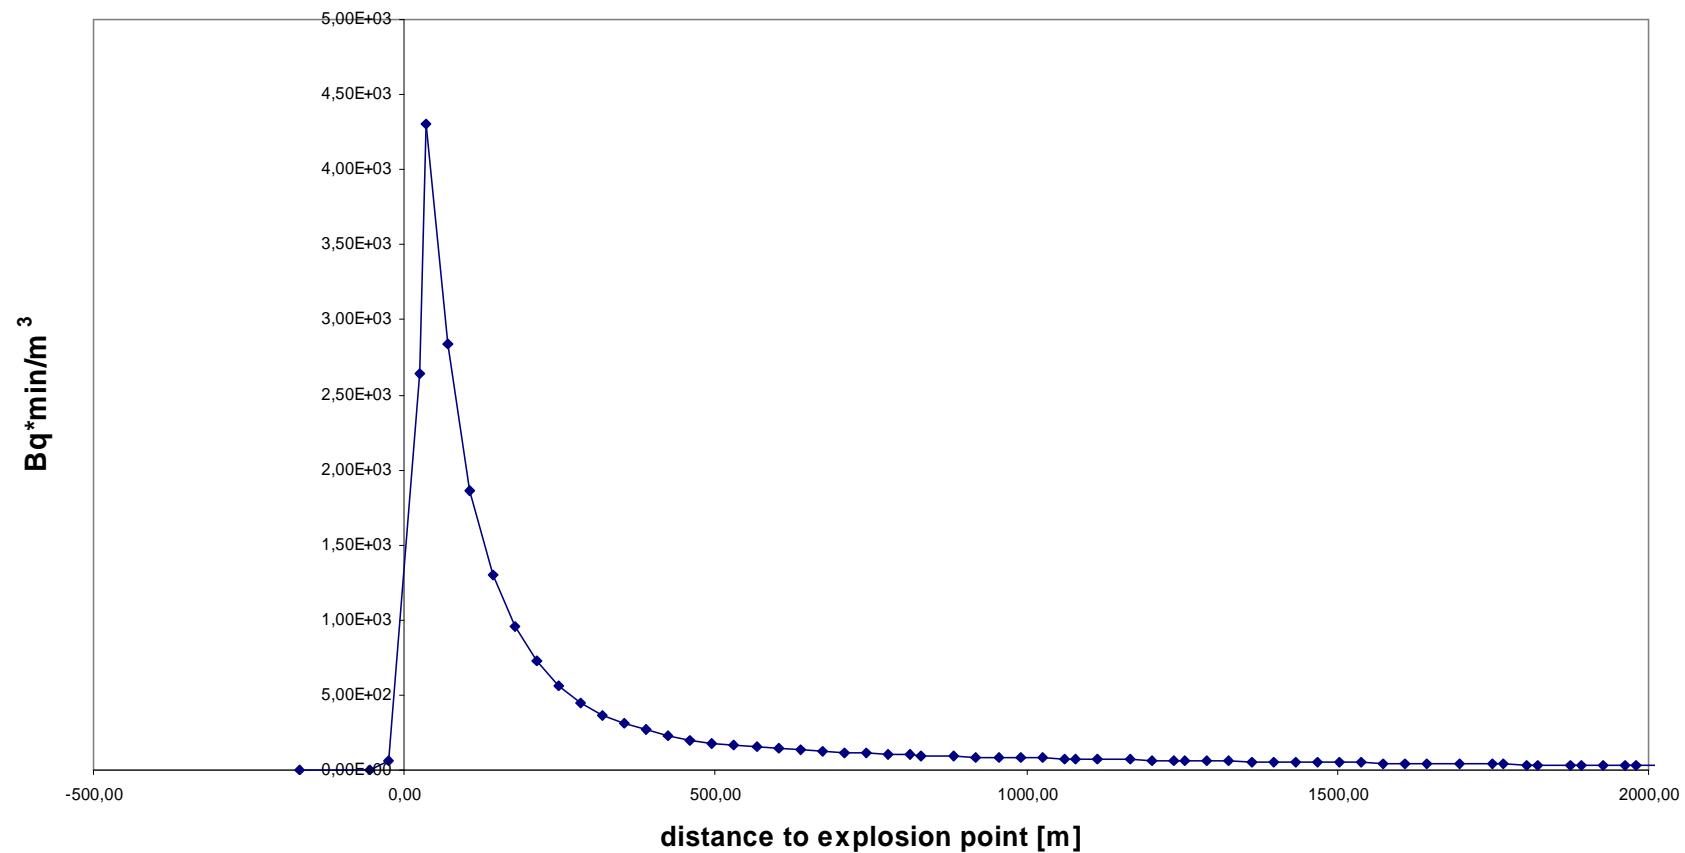

Experiment 1, time integrated activity [Bq*min/m³], 60 min

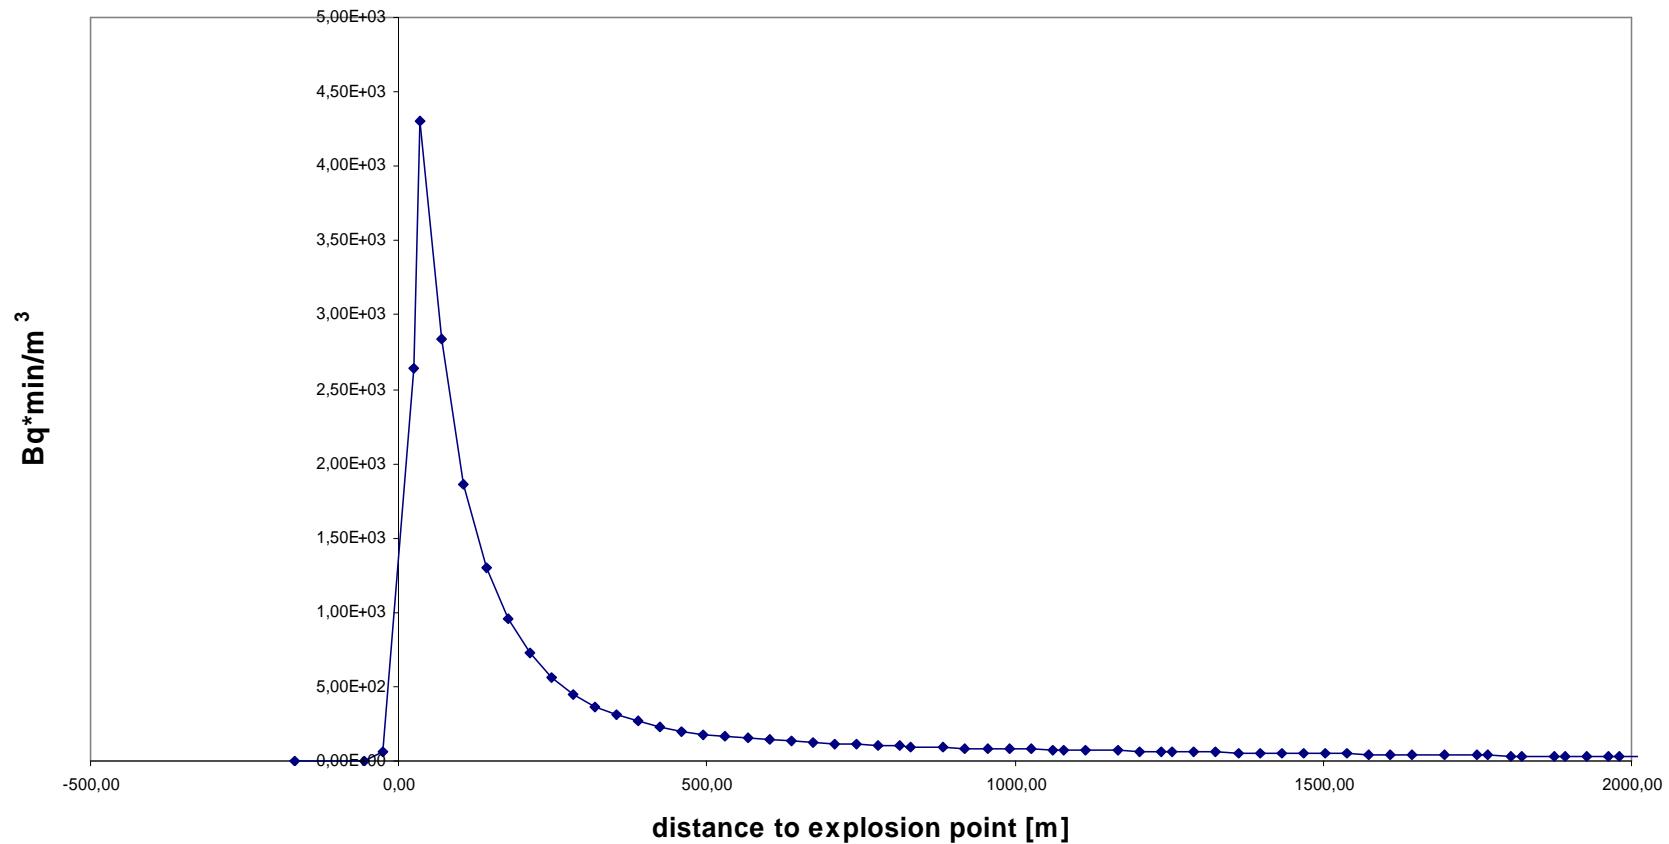

**Experiment 1, time integrated activity [Bq*min/m³], 05 min
Maxima downwind**

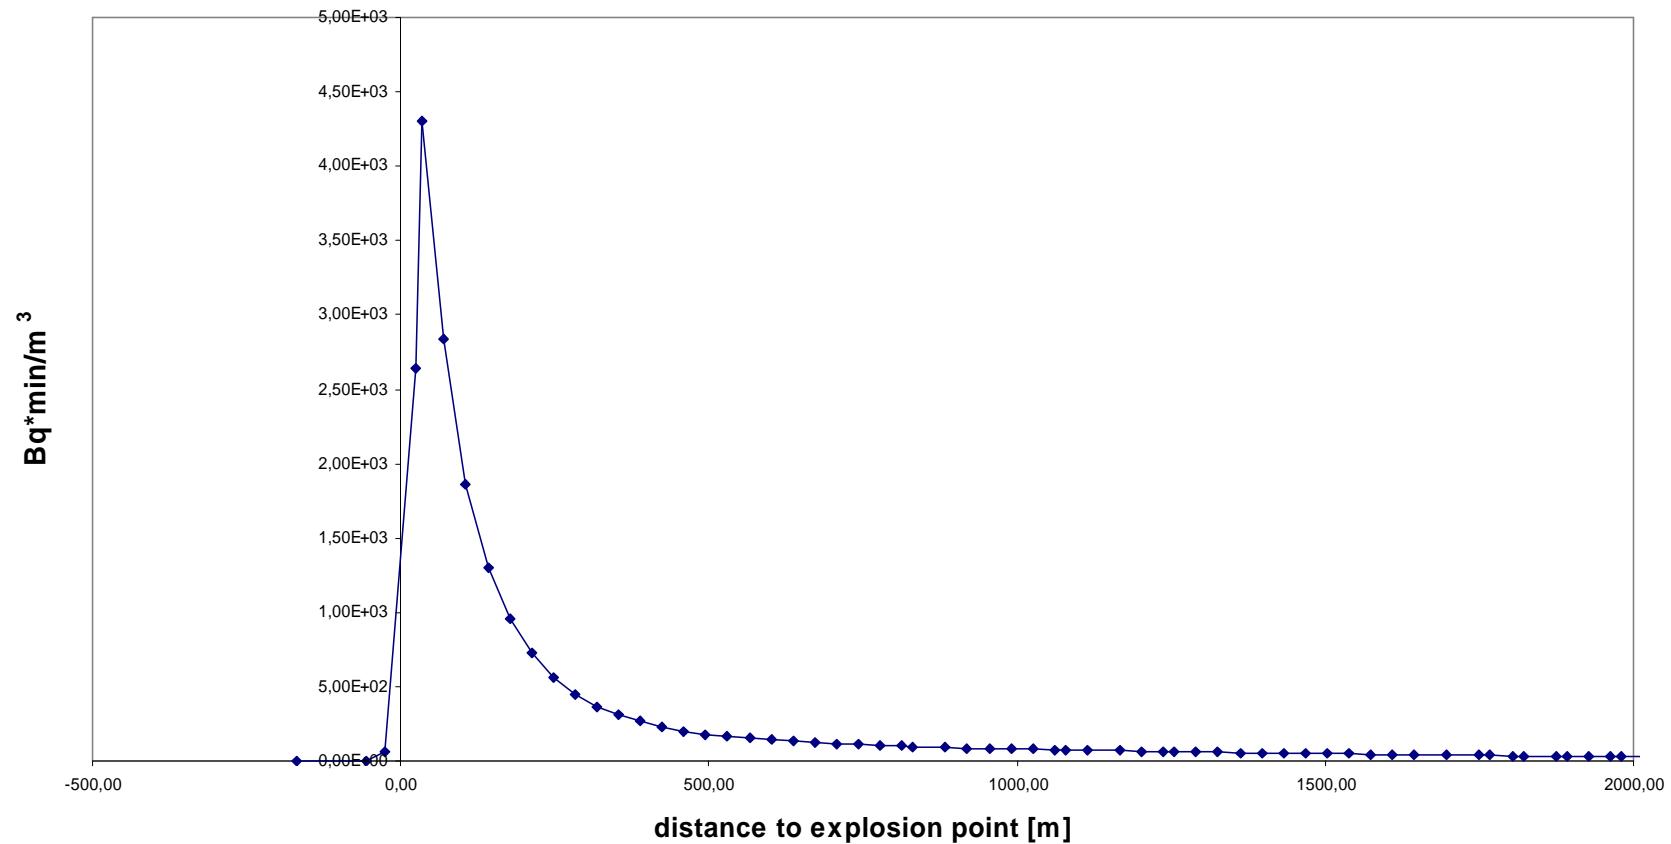

**Experiment 1, time integrated activity [Bq*min/m³], 10 min
Maxima downwind**

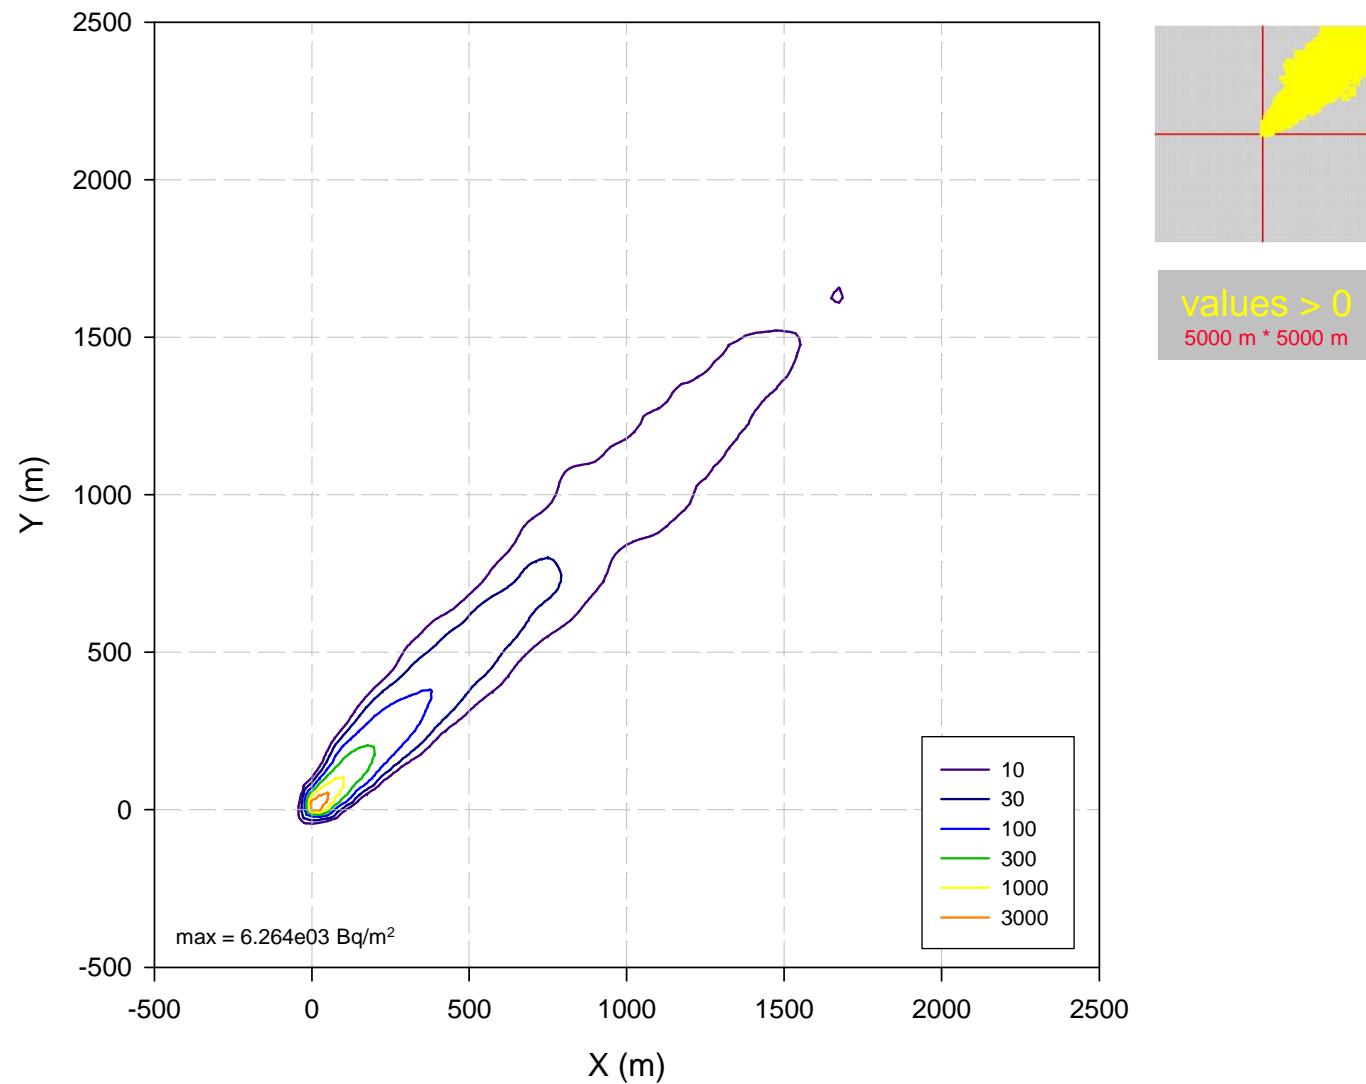

**Experiment 1, time integrated activity [Bq*min/m³], 15 min
Maxima downwind**

**Experiment 1, time integrated activity [Bq*min/m³], 60 min
Maxima downwind**

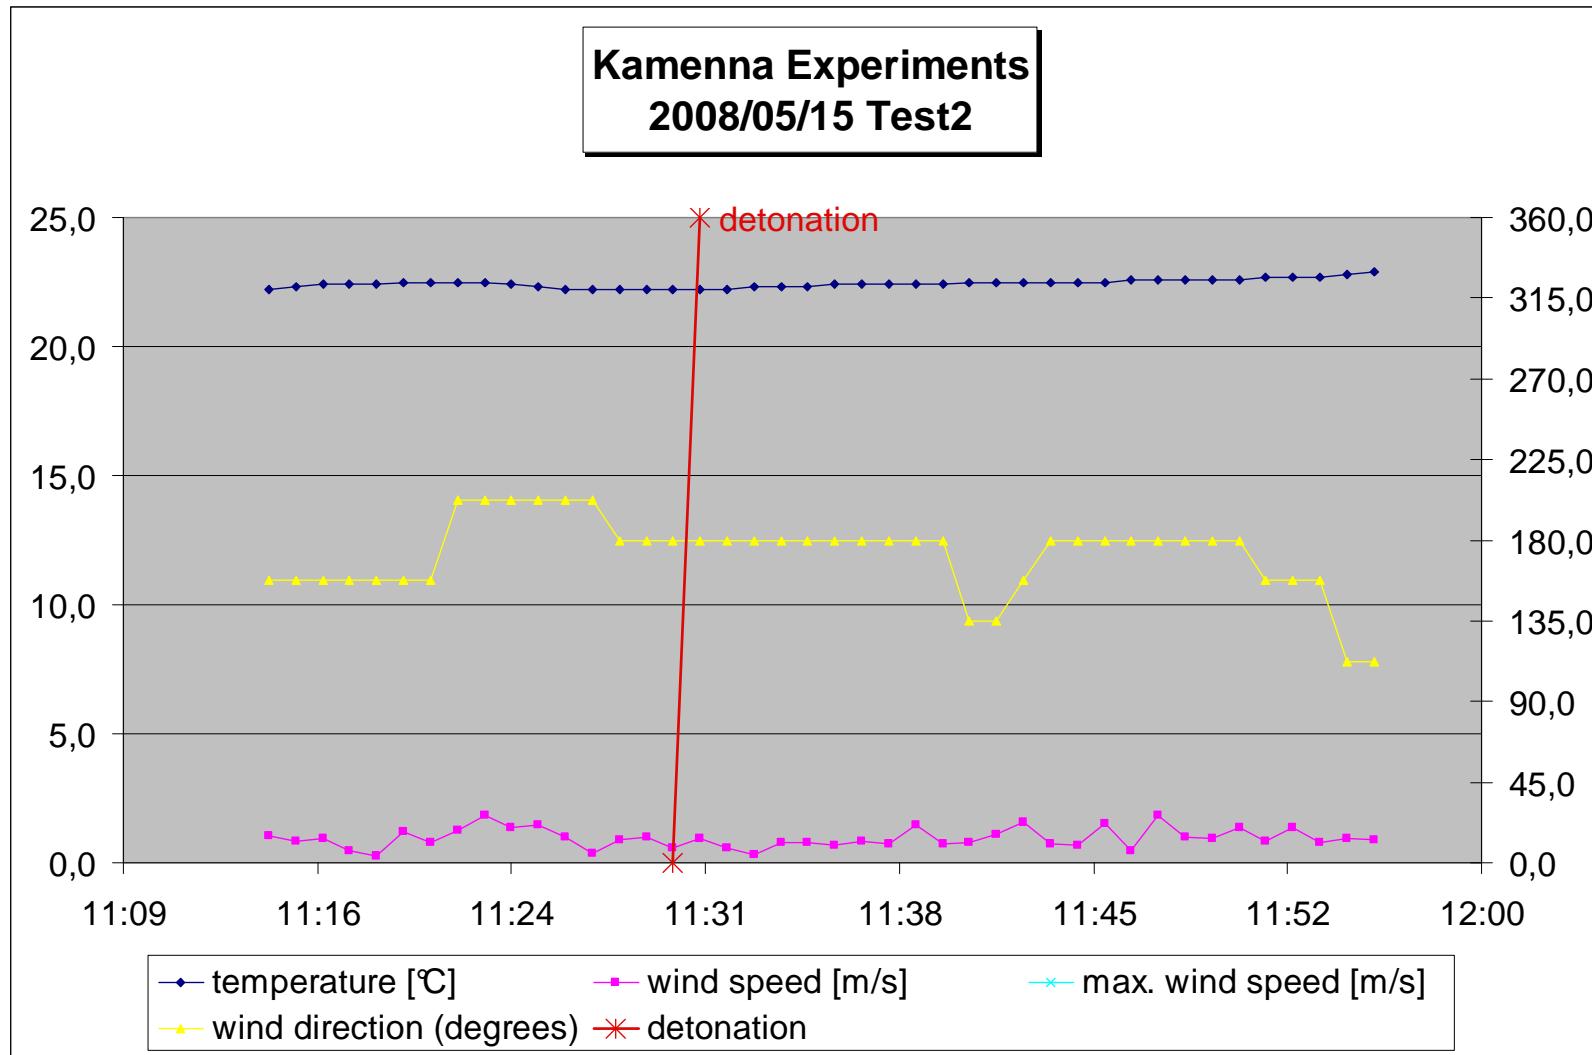

Experiment 1, Deposition [Bq/m²], 60 min

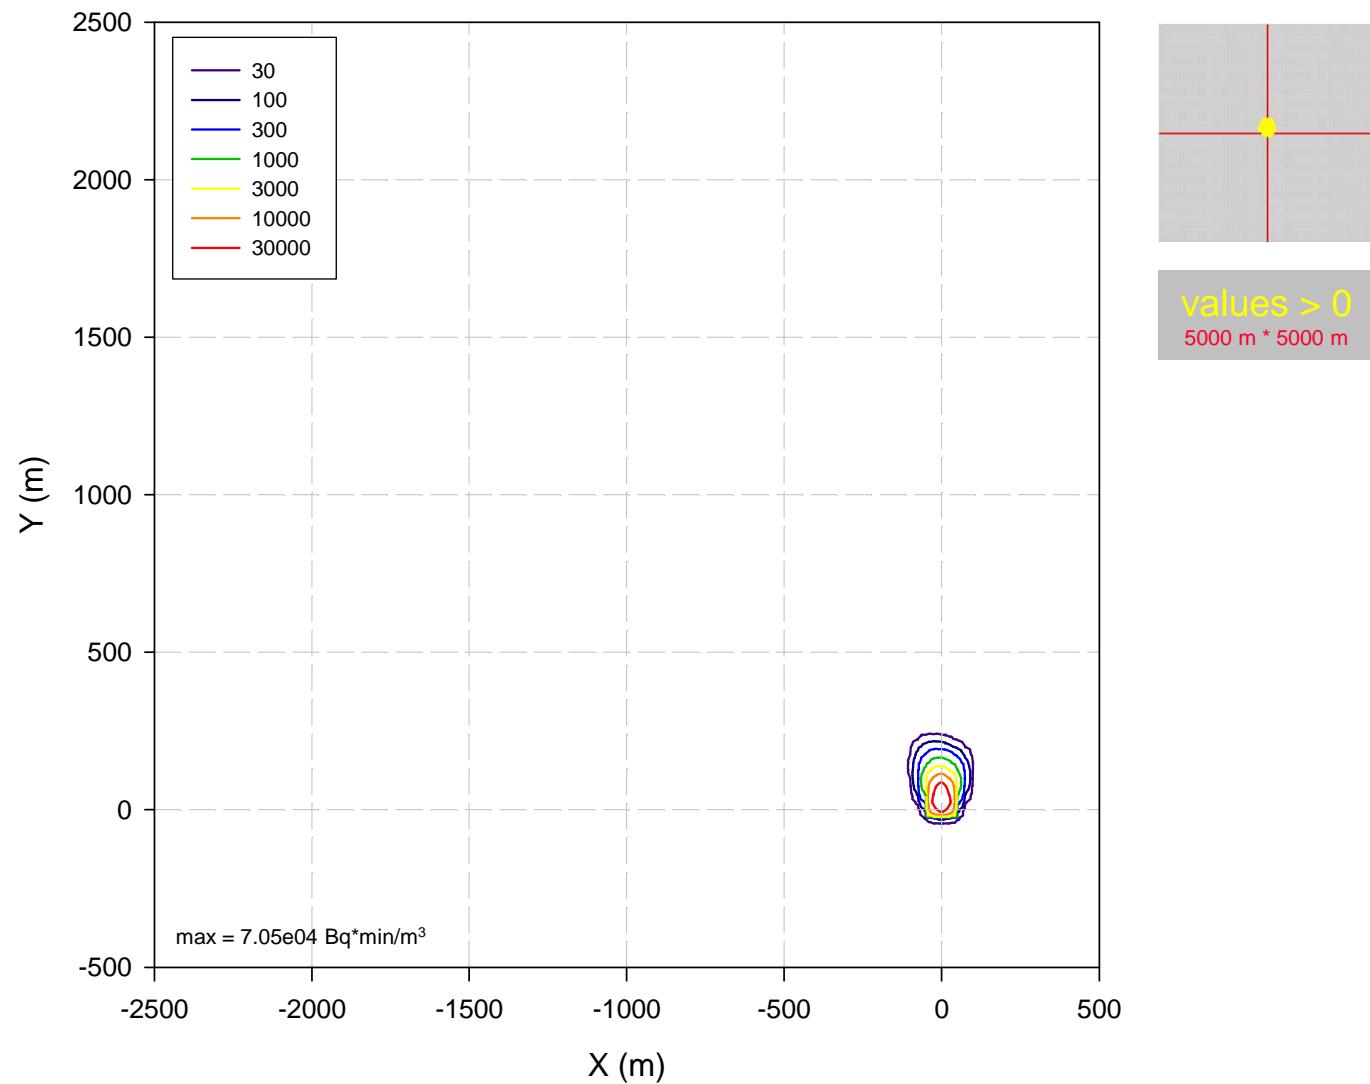

Hartmut Walter
Federal Office for Radiation Protection, Germany

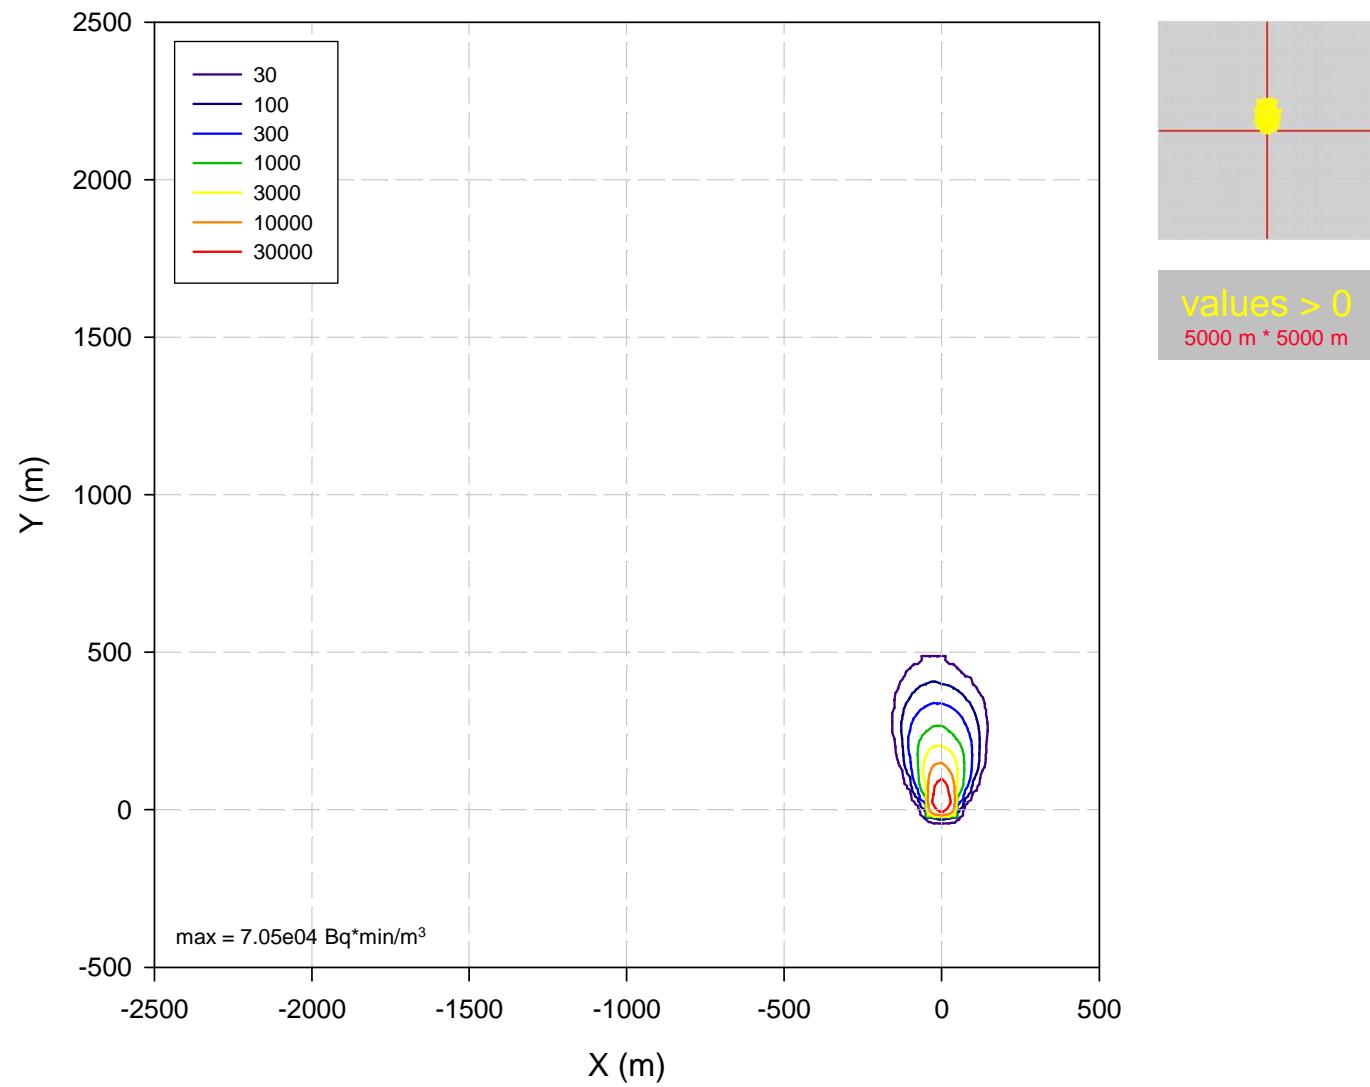

Meteorology Test 2

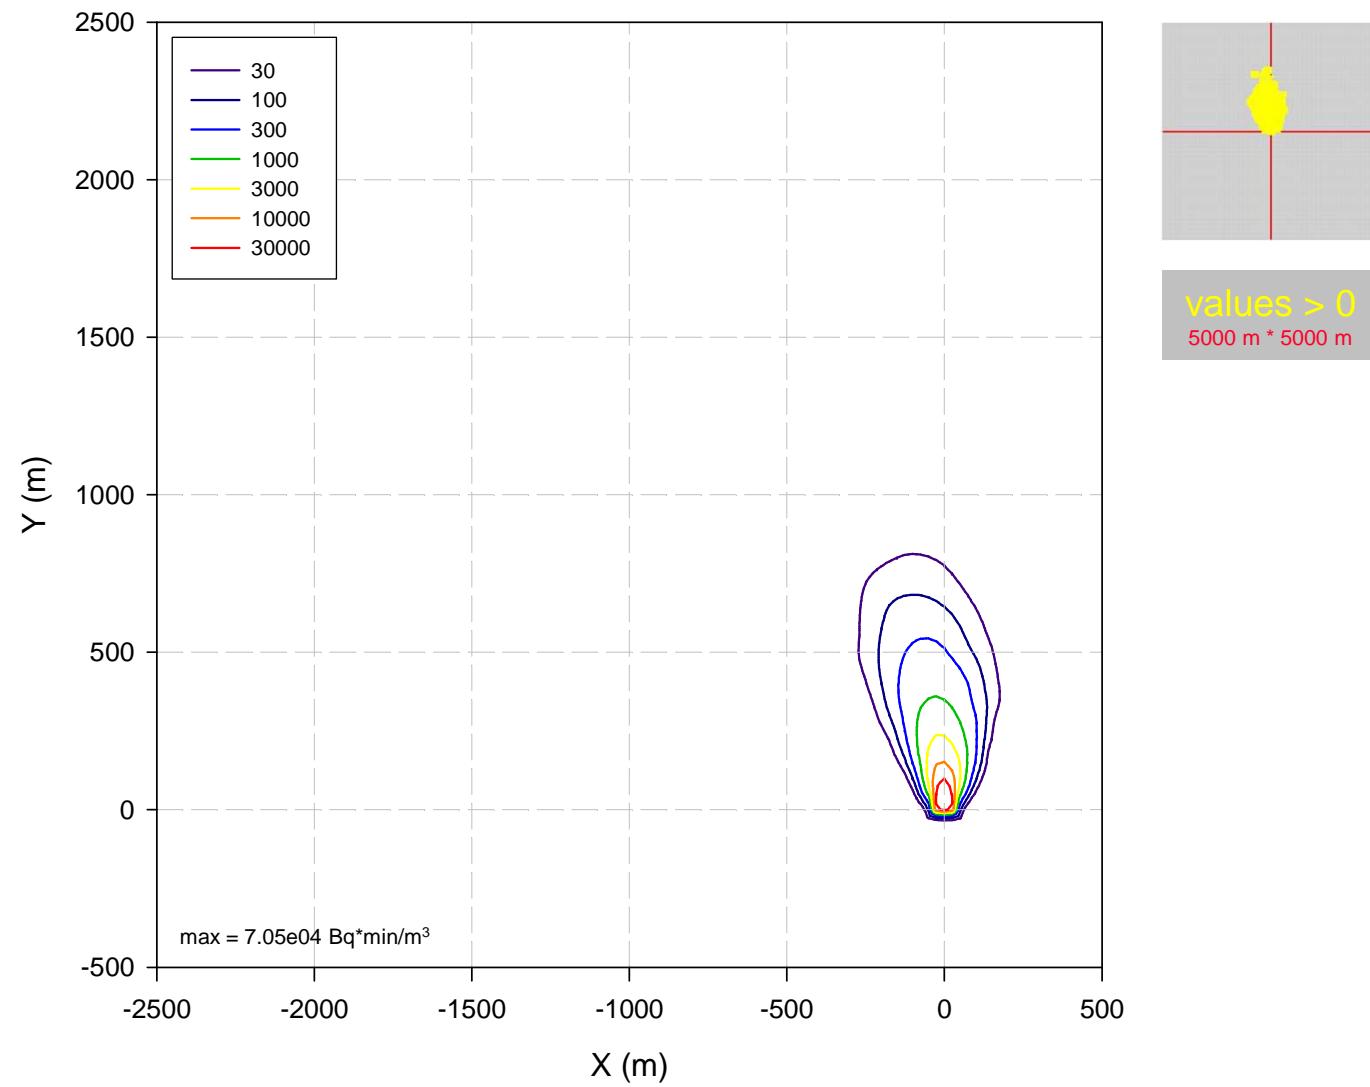

Experiment 2, time integrated activity [Bq*min/m³], 05 min

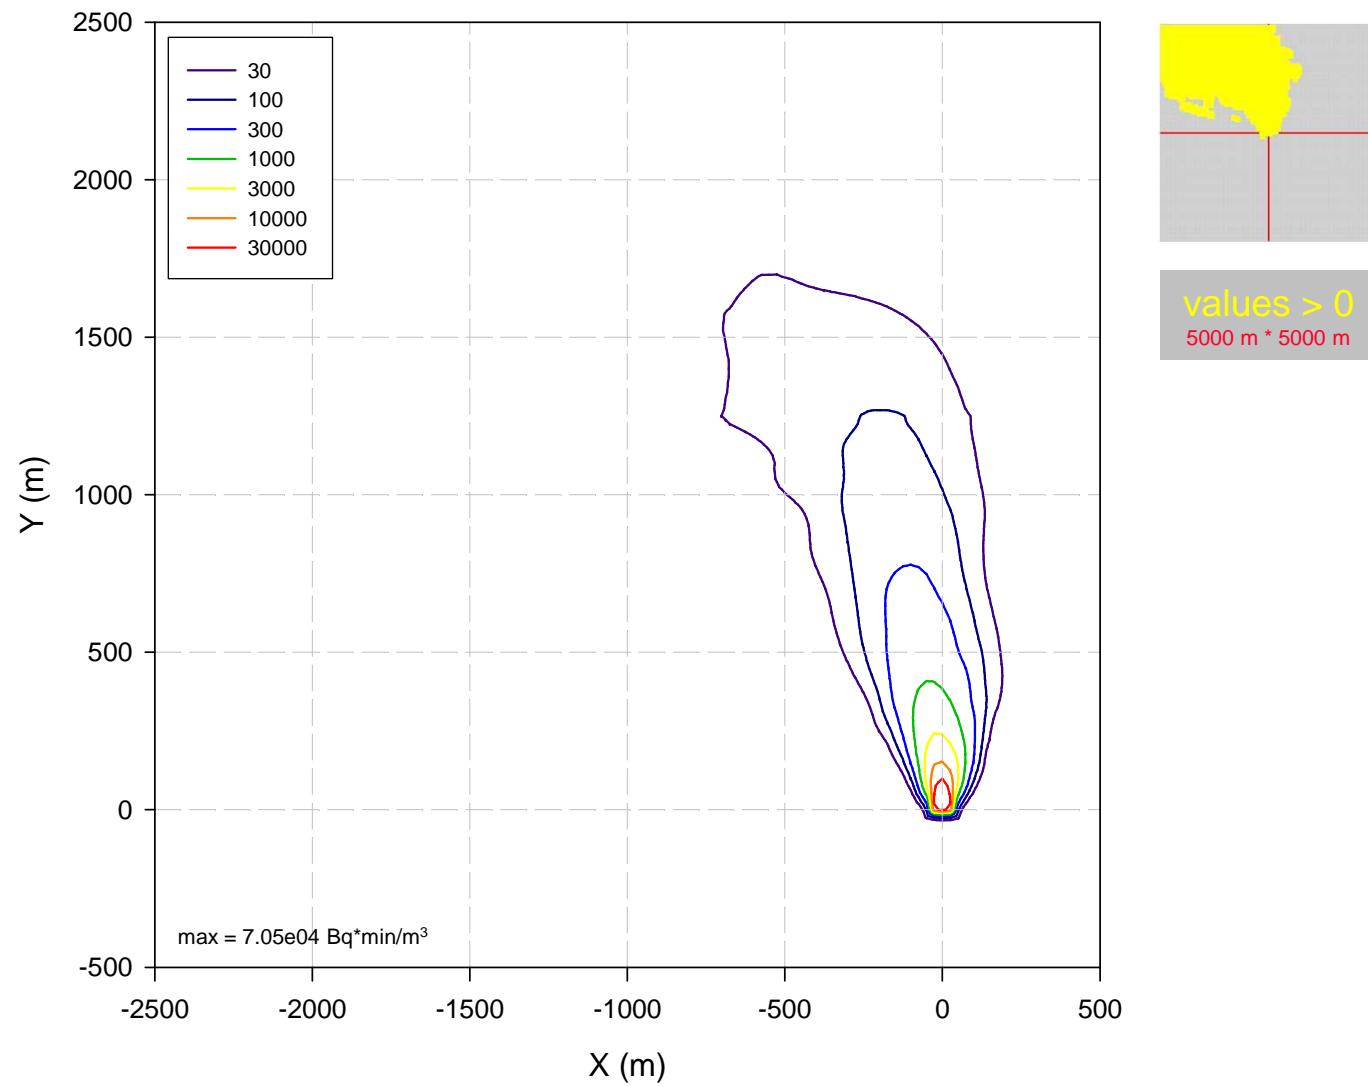

Experiment 2, time integrated activity [Bq*min/m³], 10 min

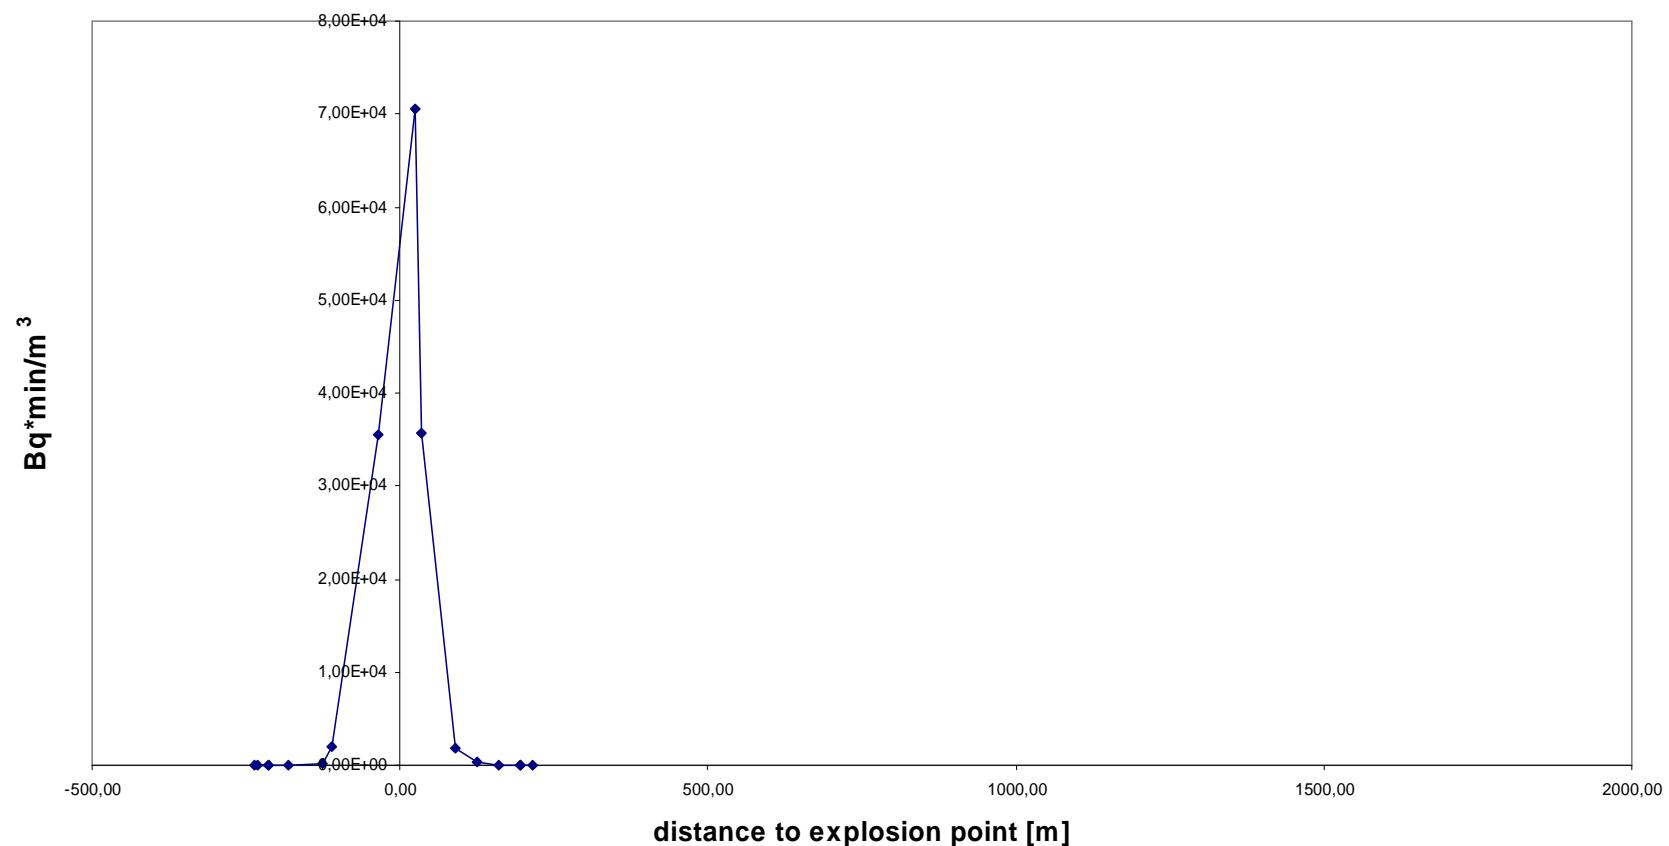

Experiment 2, time integrated activity [Bq*min/m³], 15 min

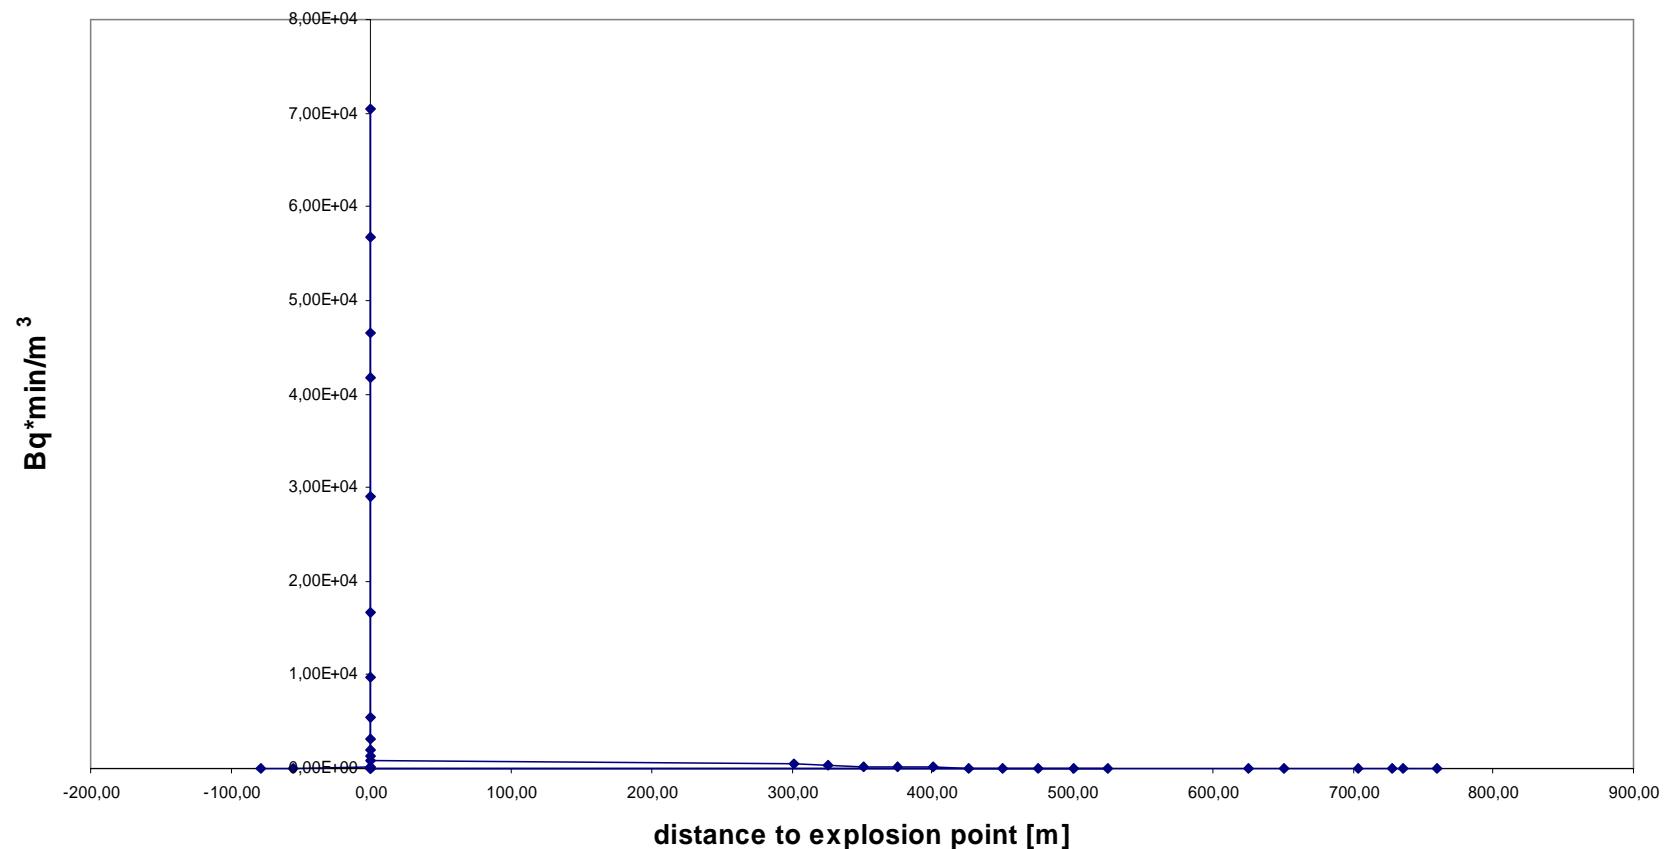

Experiment 2, time integrated activity [Bq*min/m³], 60 min

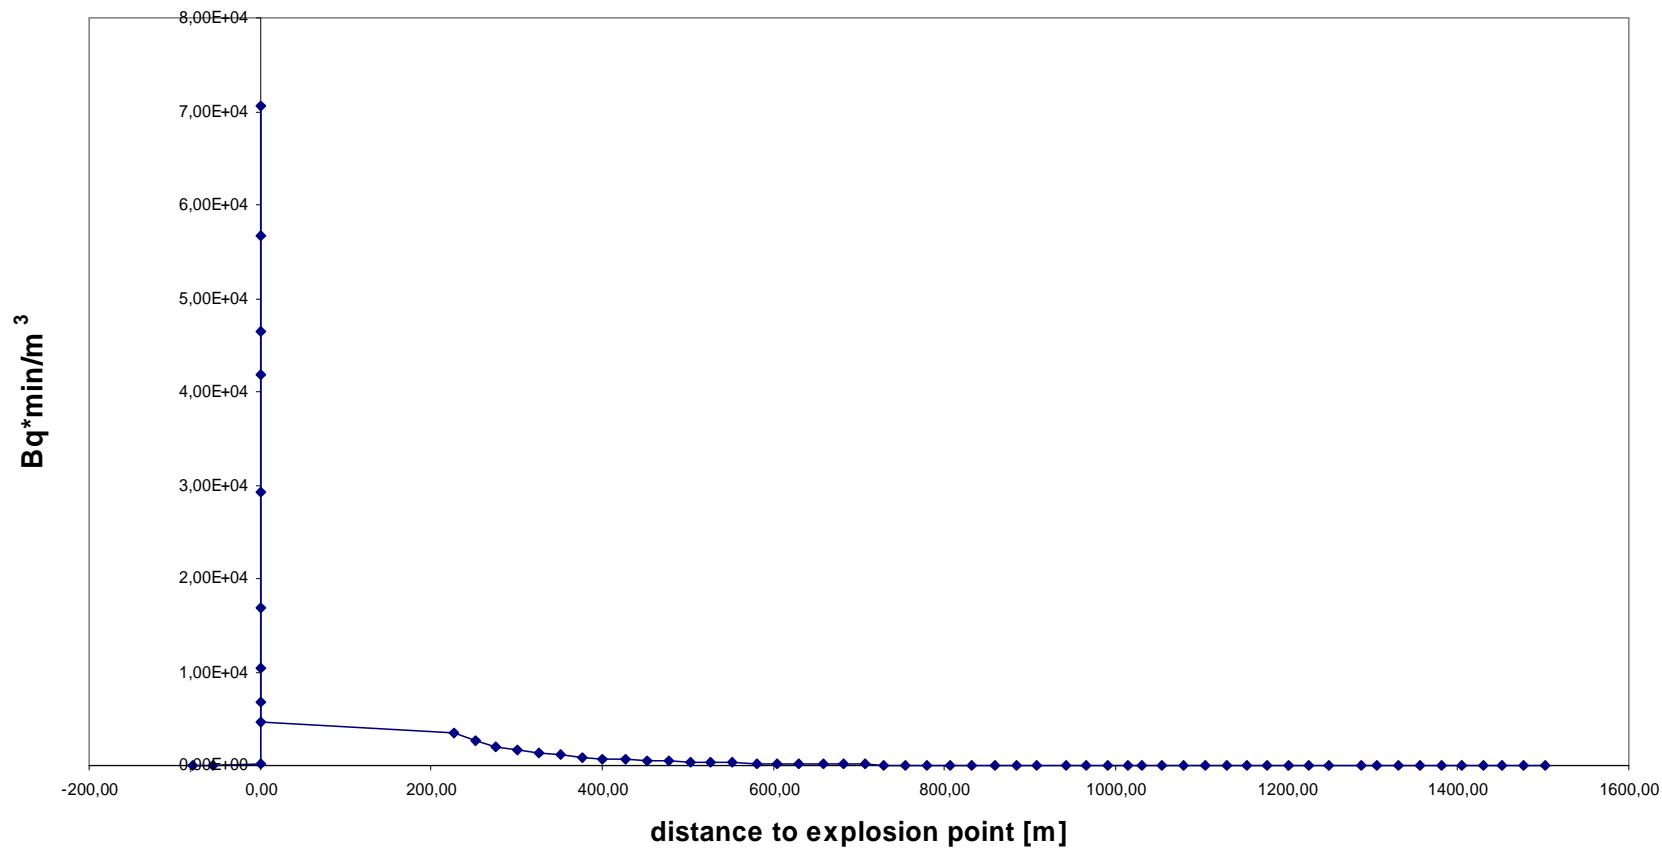

**Experiment 2, time integrated activity [Bq*min/m³], 05 min
Maxima downwind**

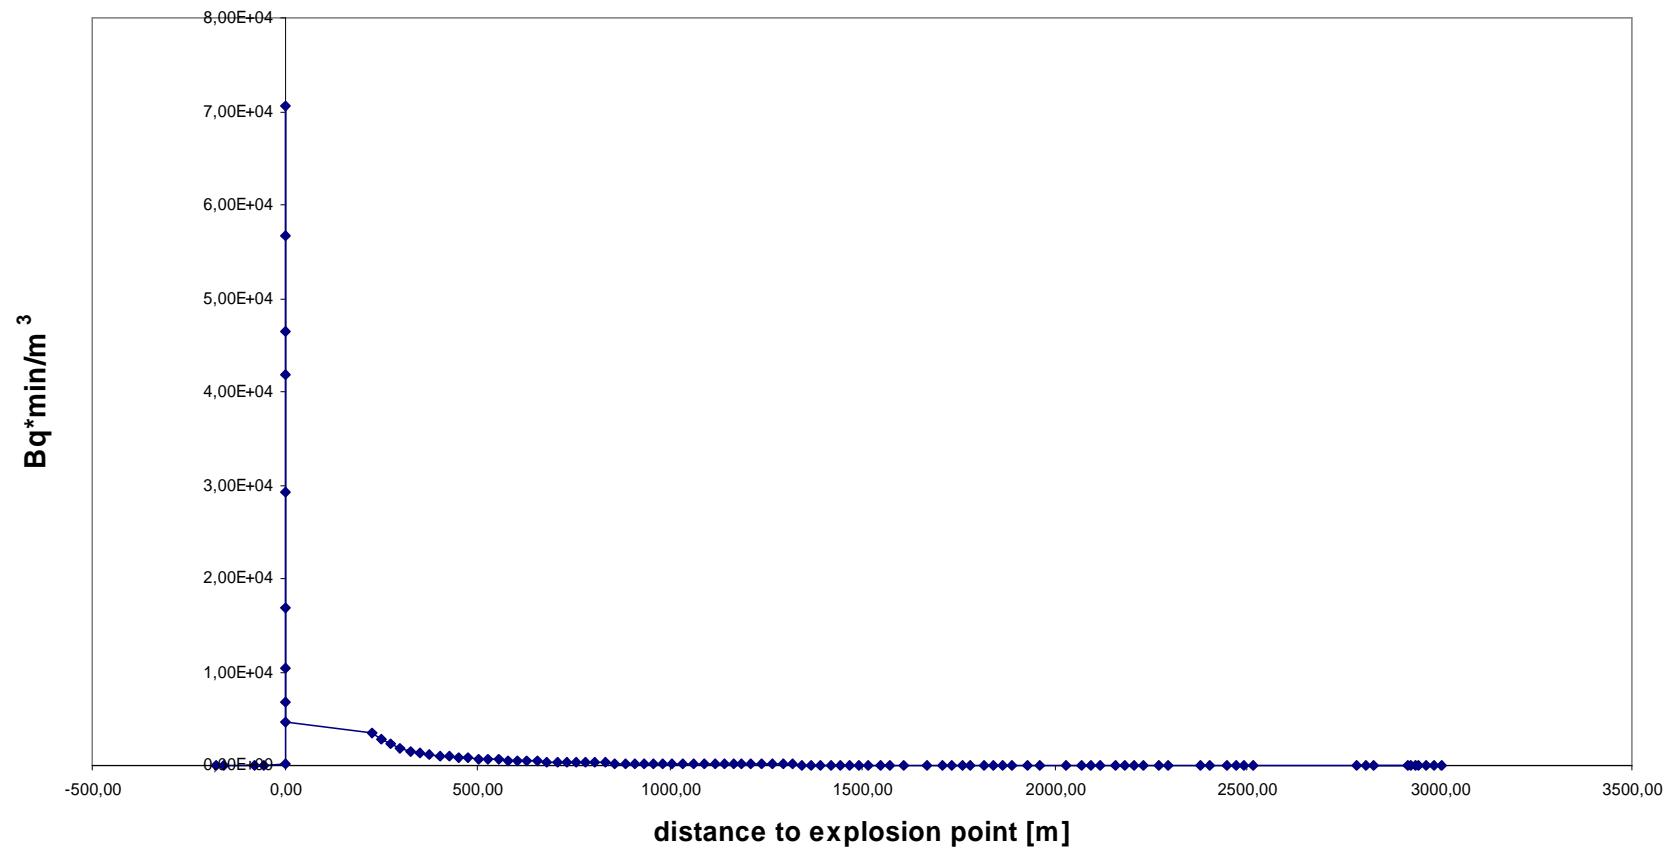

**Experiment 2, time integrated activity [Bq*min/m³], 10 min
Maxima downwind**

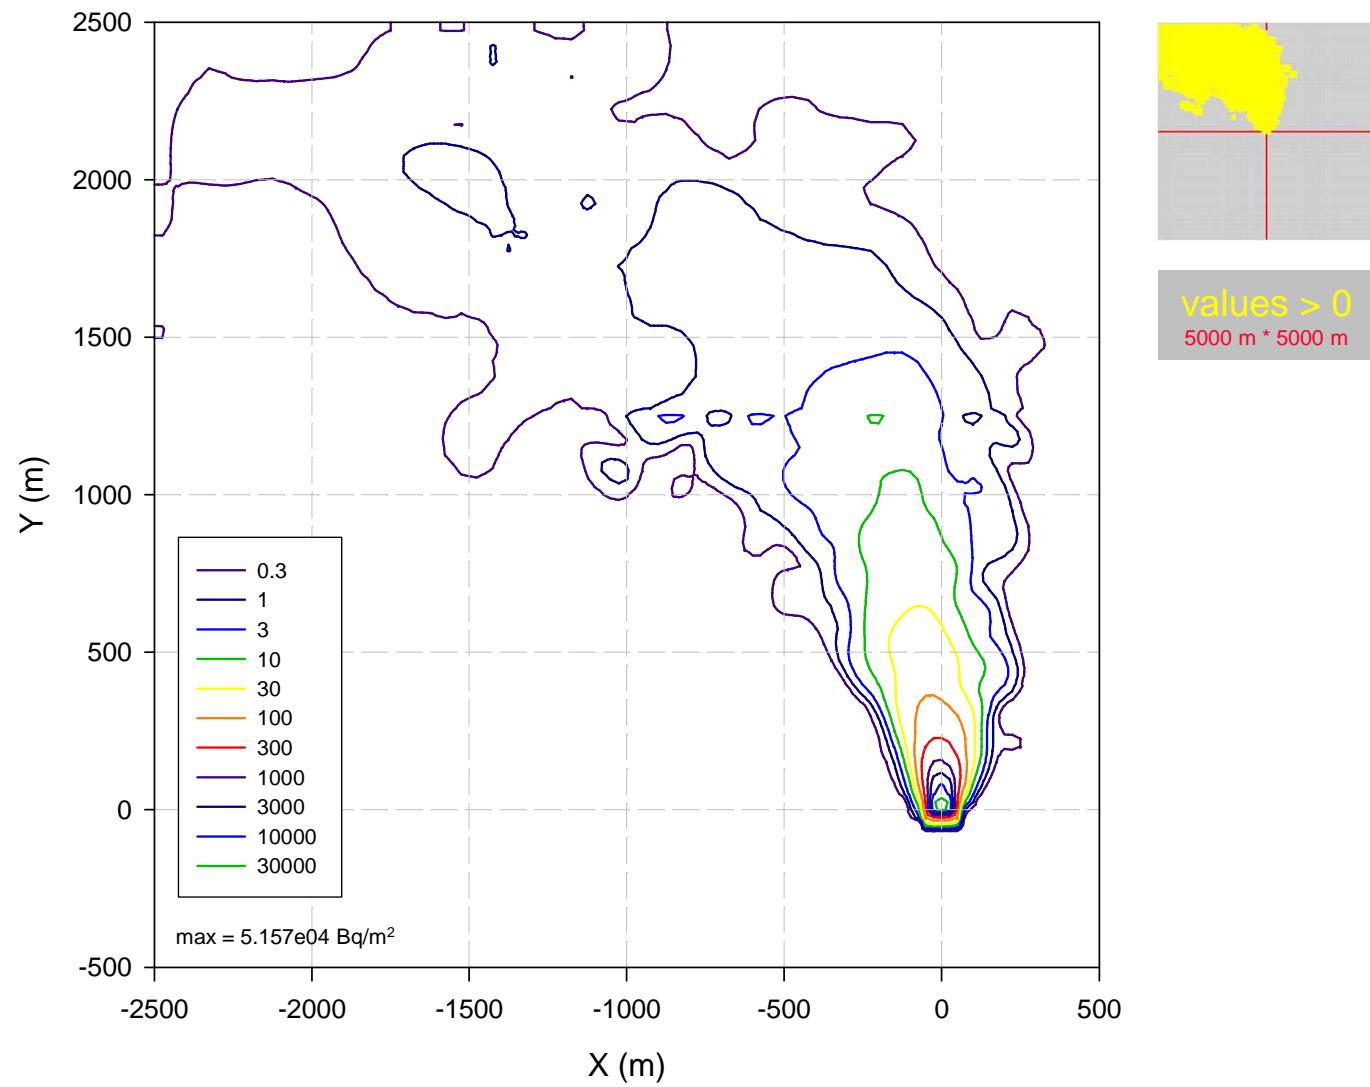

**Experiment 2, time integrated activity [Bq*min/m³], 15 min
Maxima downwind**

**Experiment 2, time integrated activity [Bq*min/m³], 60 min
Maxima downwind**

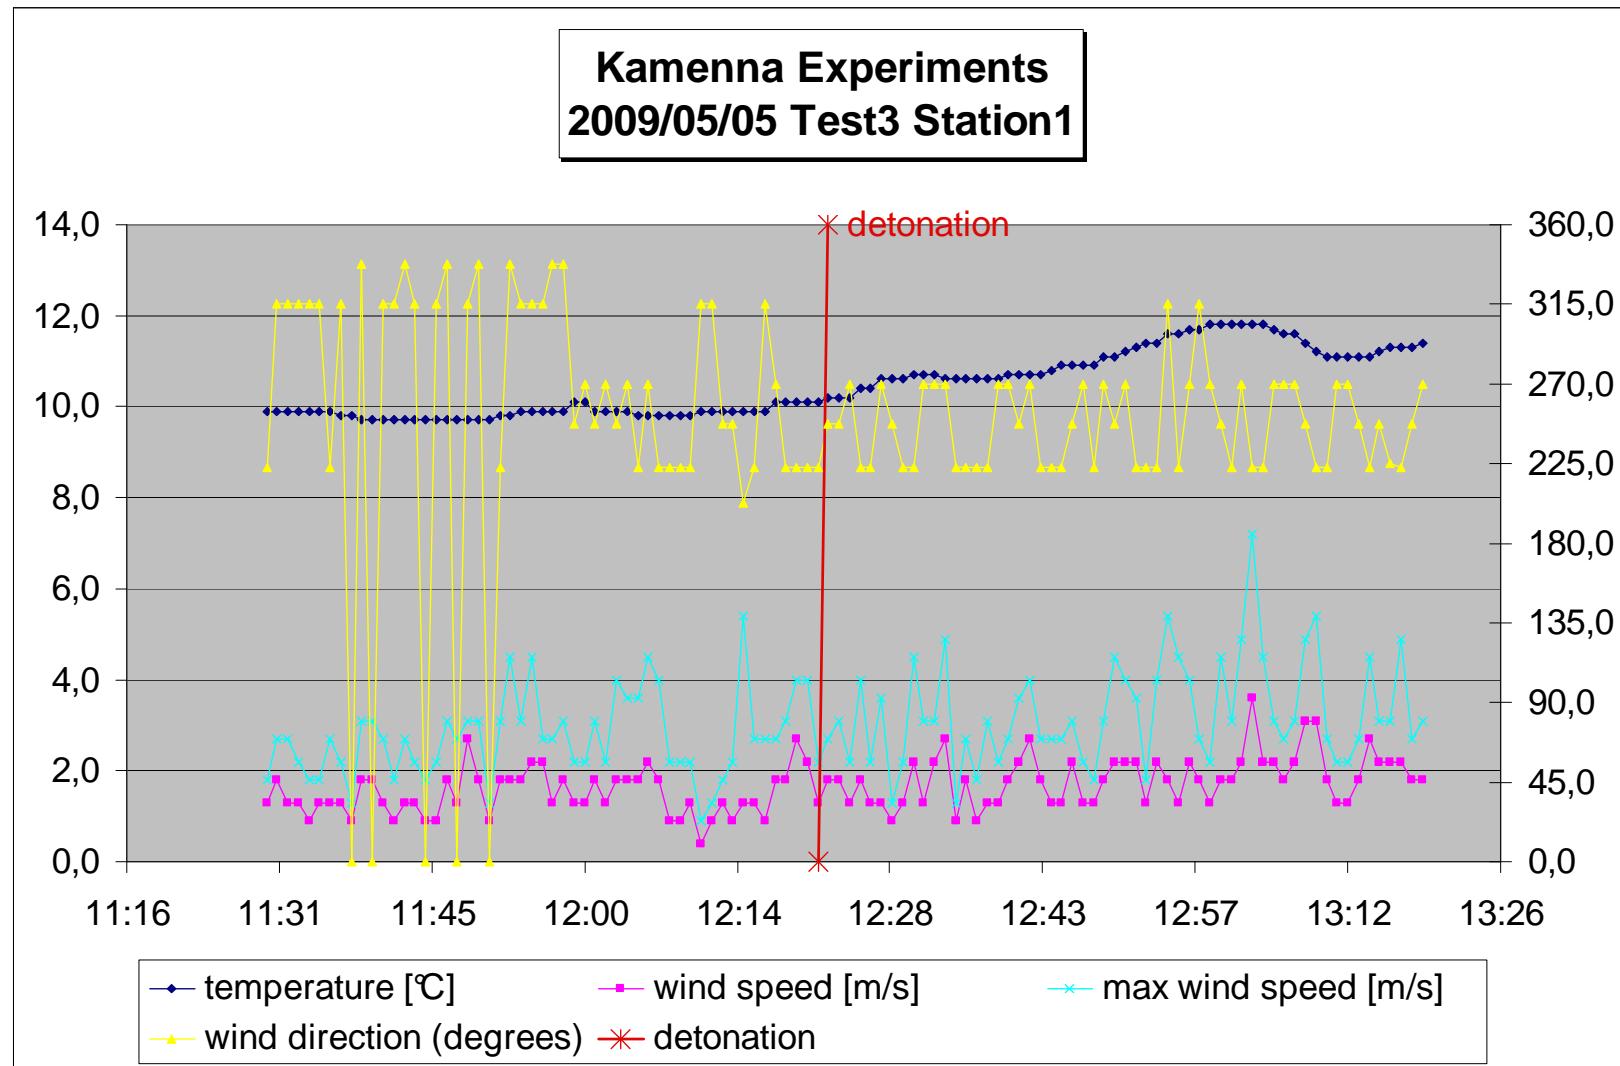

Experiment 2, Deposition [Bq/m²], 60 min

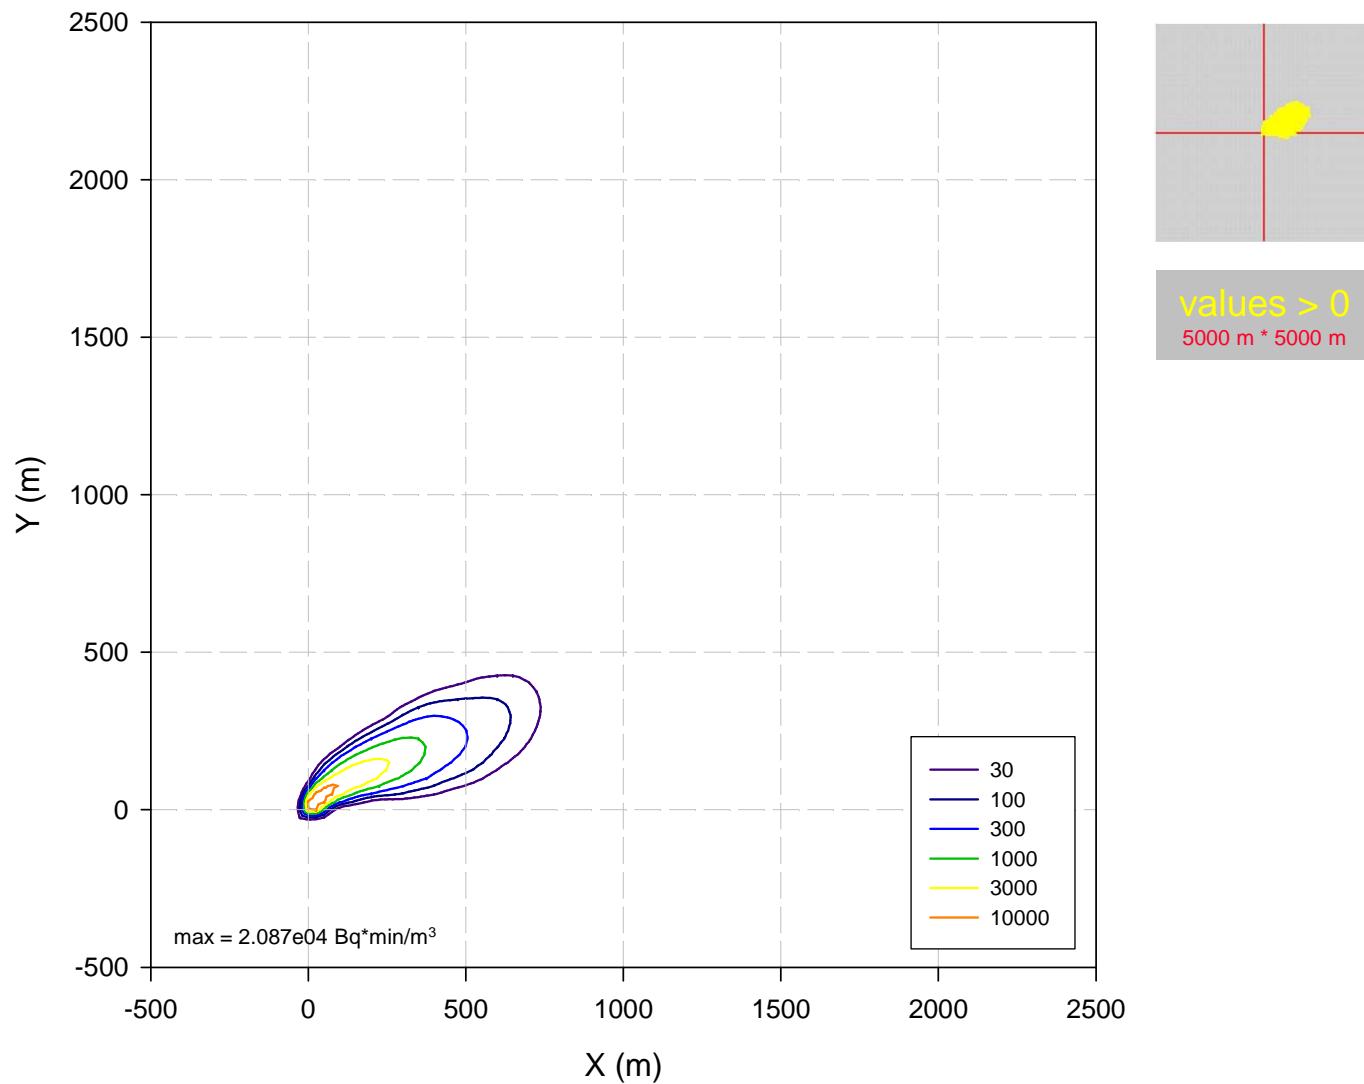

Hartmut Walter
Federal Office for Radiation Protection, Germany

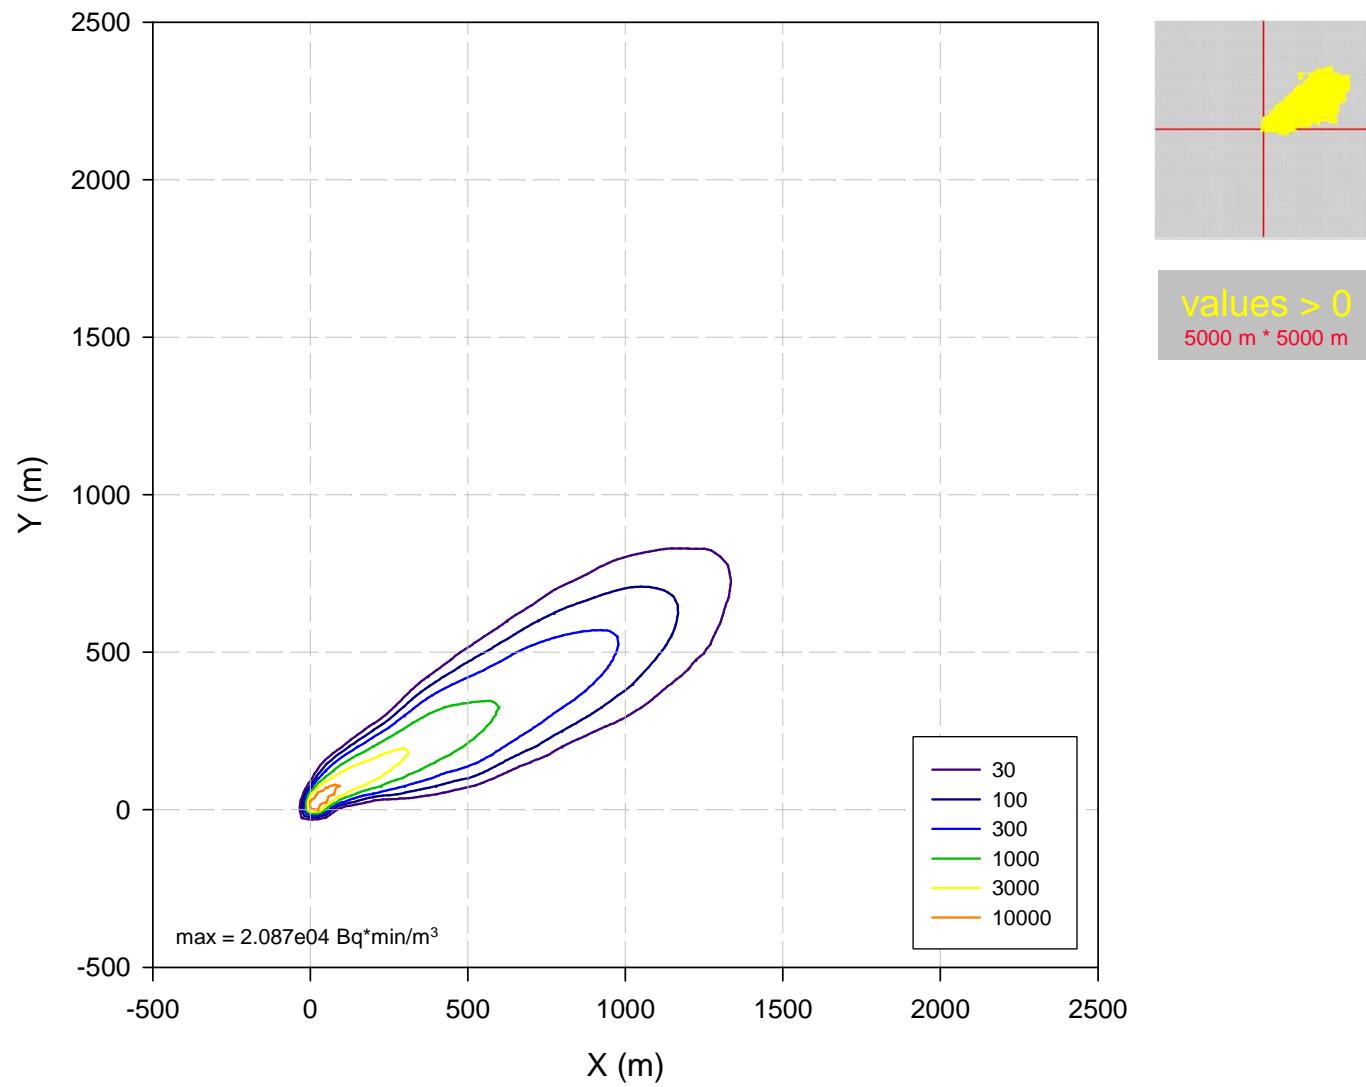

Meteorology Test 3

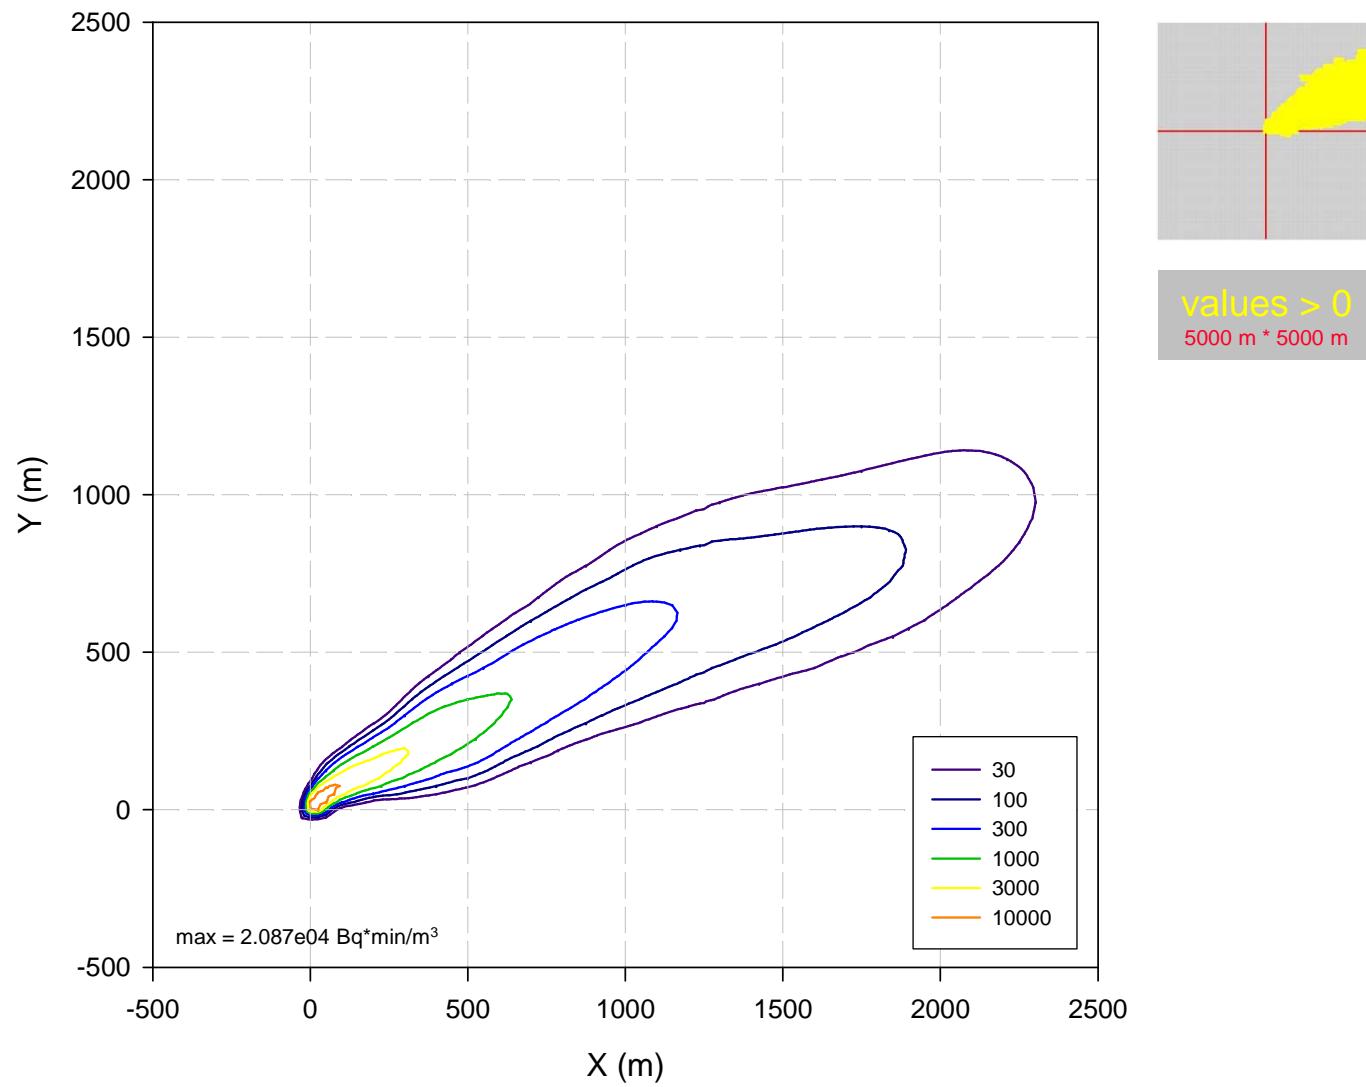

Experiment 3, time integrated activity [Bq*min/m³], 05 min

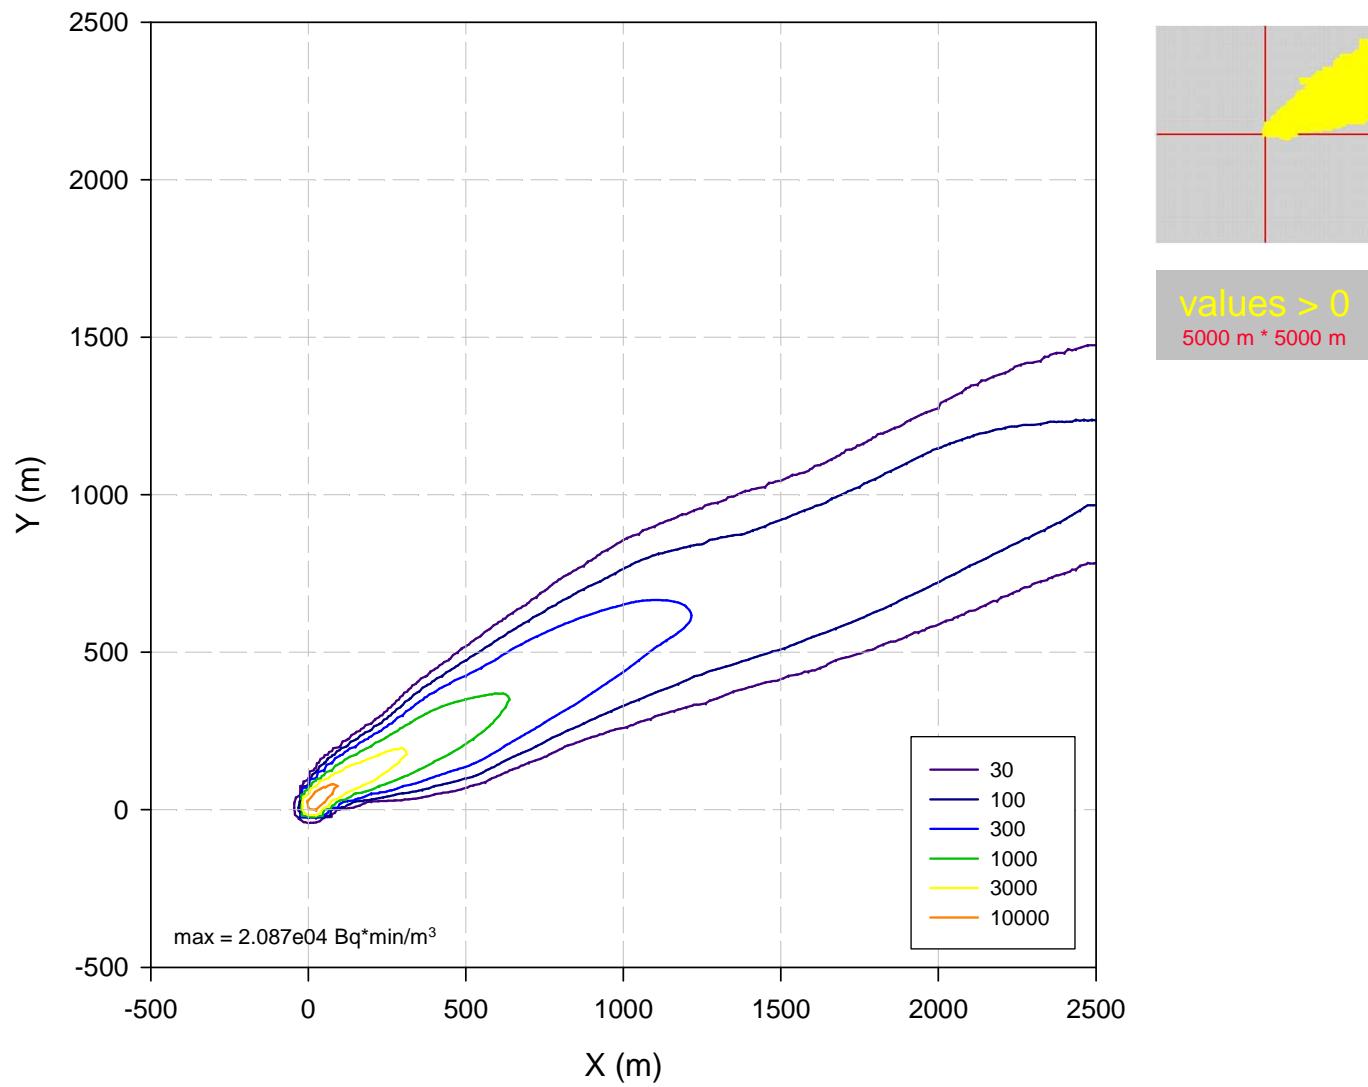

Experiment 3, time integrated activity [Bq*min/m³], 10 min

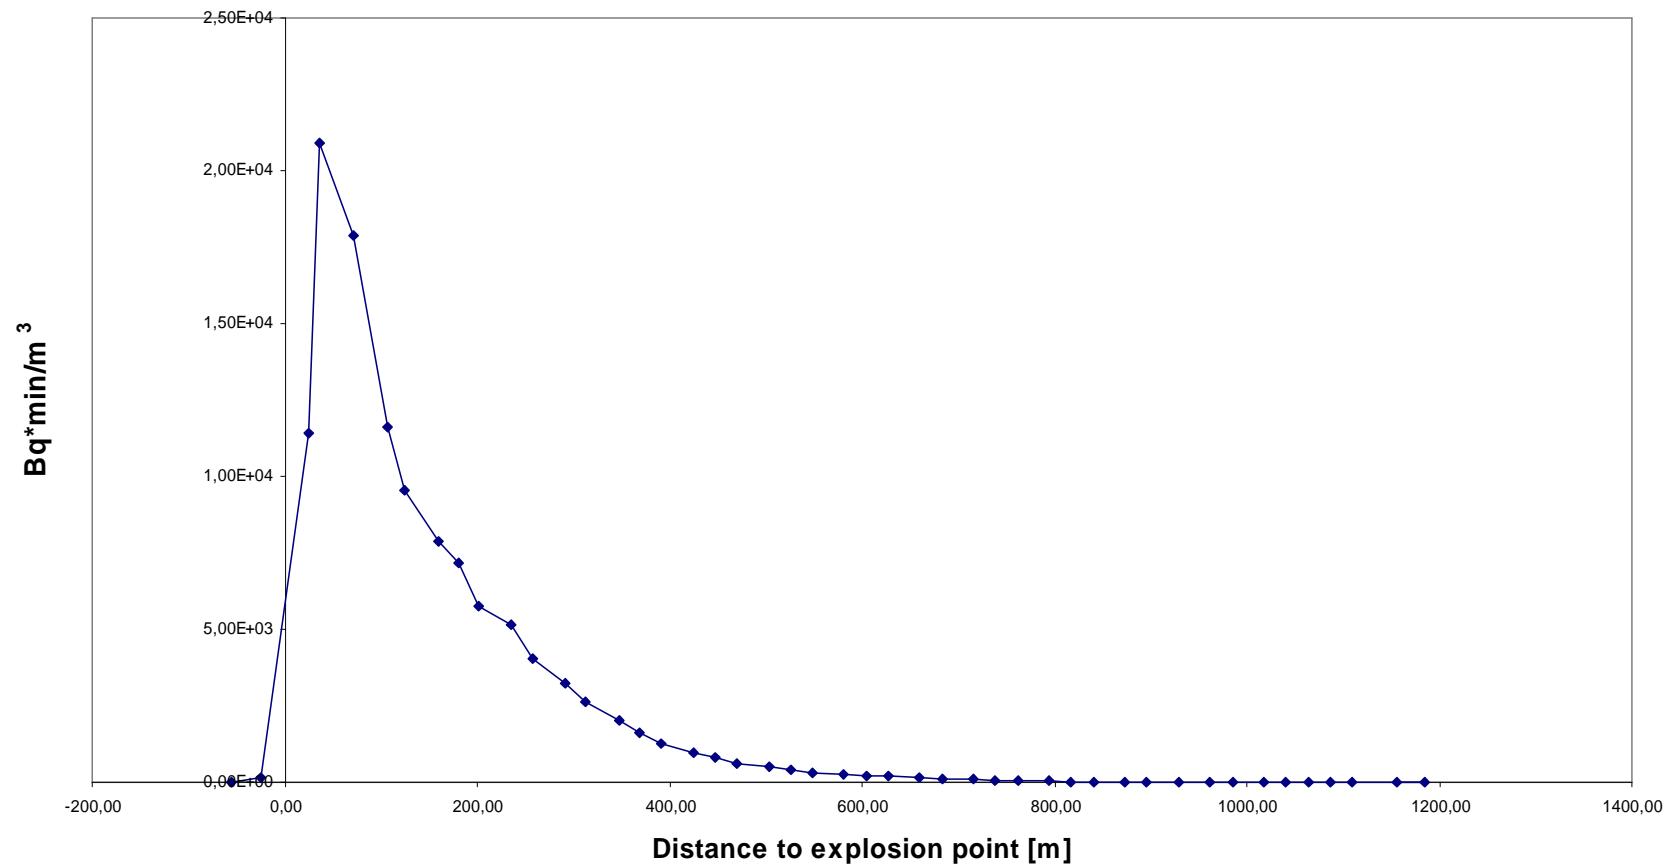

Experiment 3, time integrated activity [Bq*min/m³], 15 min

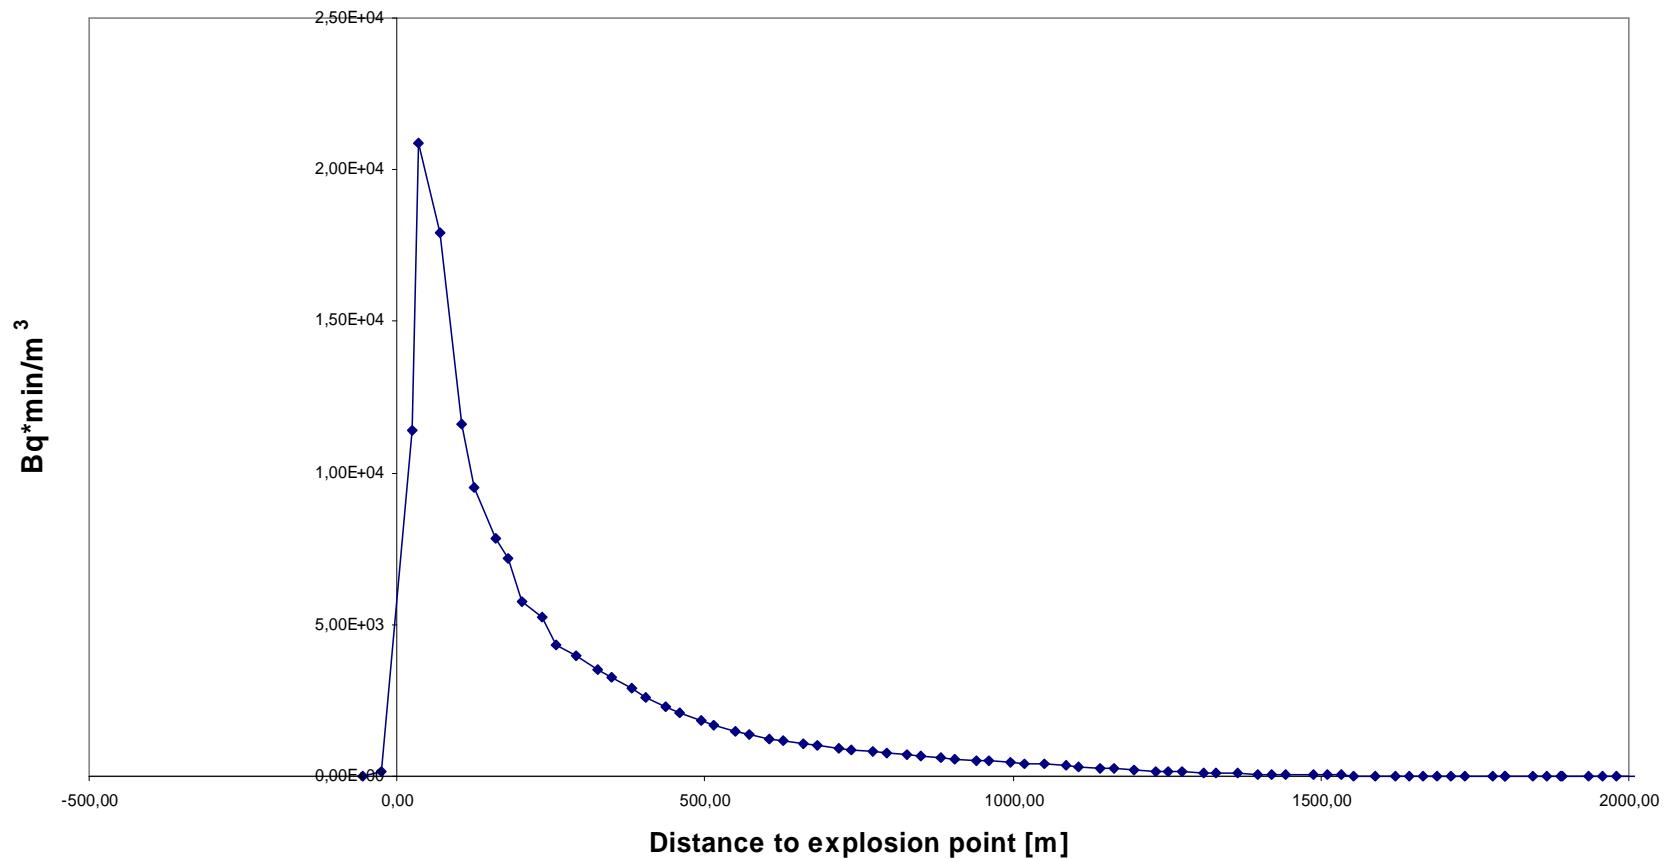

Experiment 3, time integrated activity [Bq*min/m³], 60 min

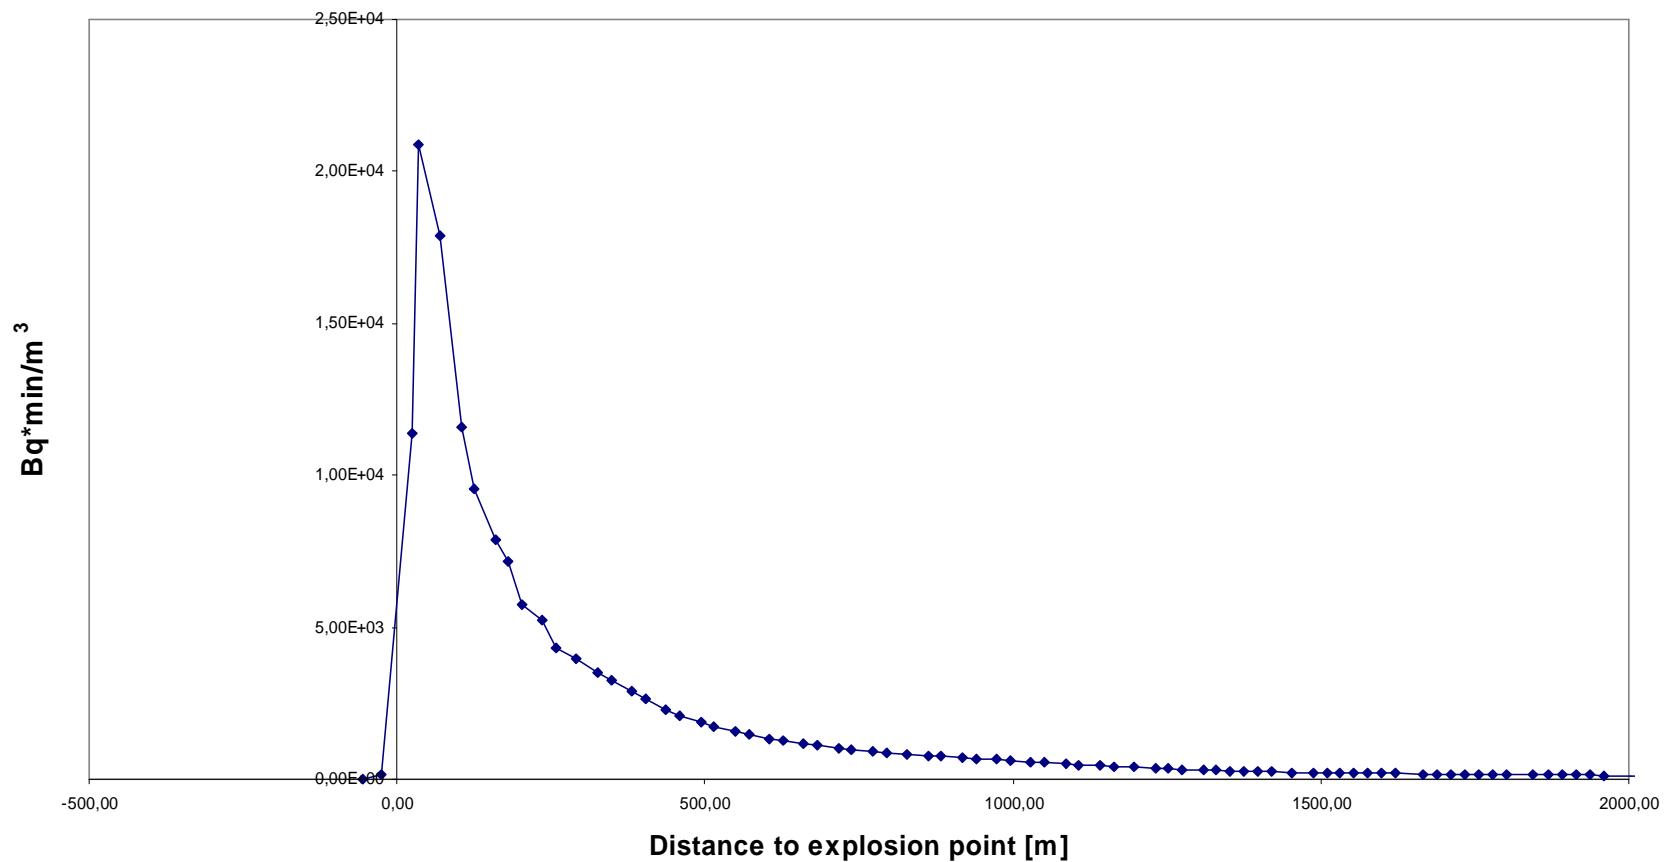

Experiment 3, Activity [$\text{Bq}^*\text{min}/\text{m}^3$], 05 min
Maxima downwind

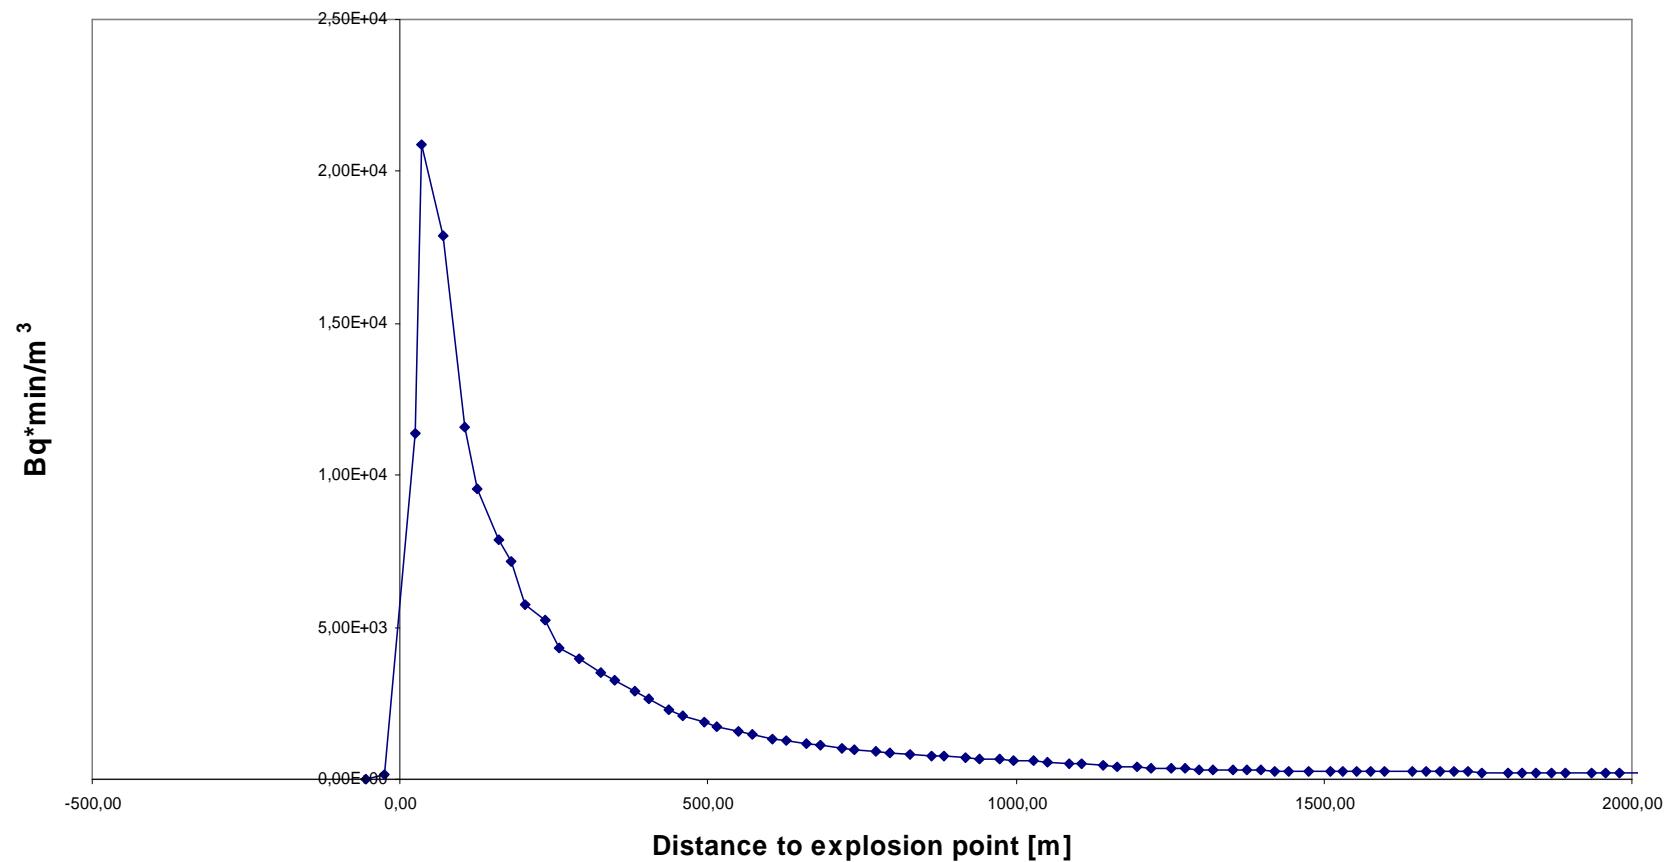

**Experiment 3, time integrated activity [Bq*min/m³], 10 min
Maxima downwind**

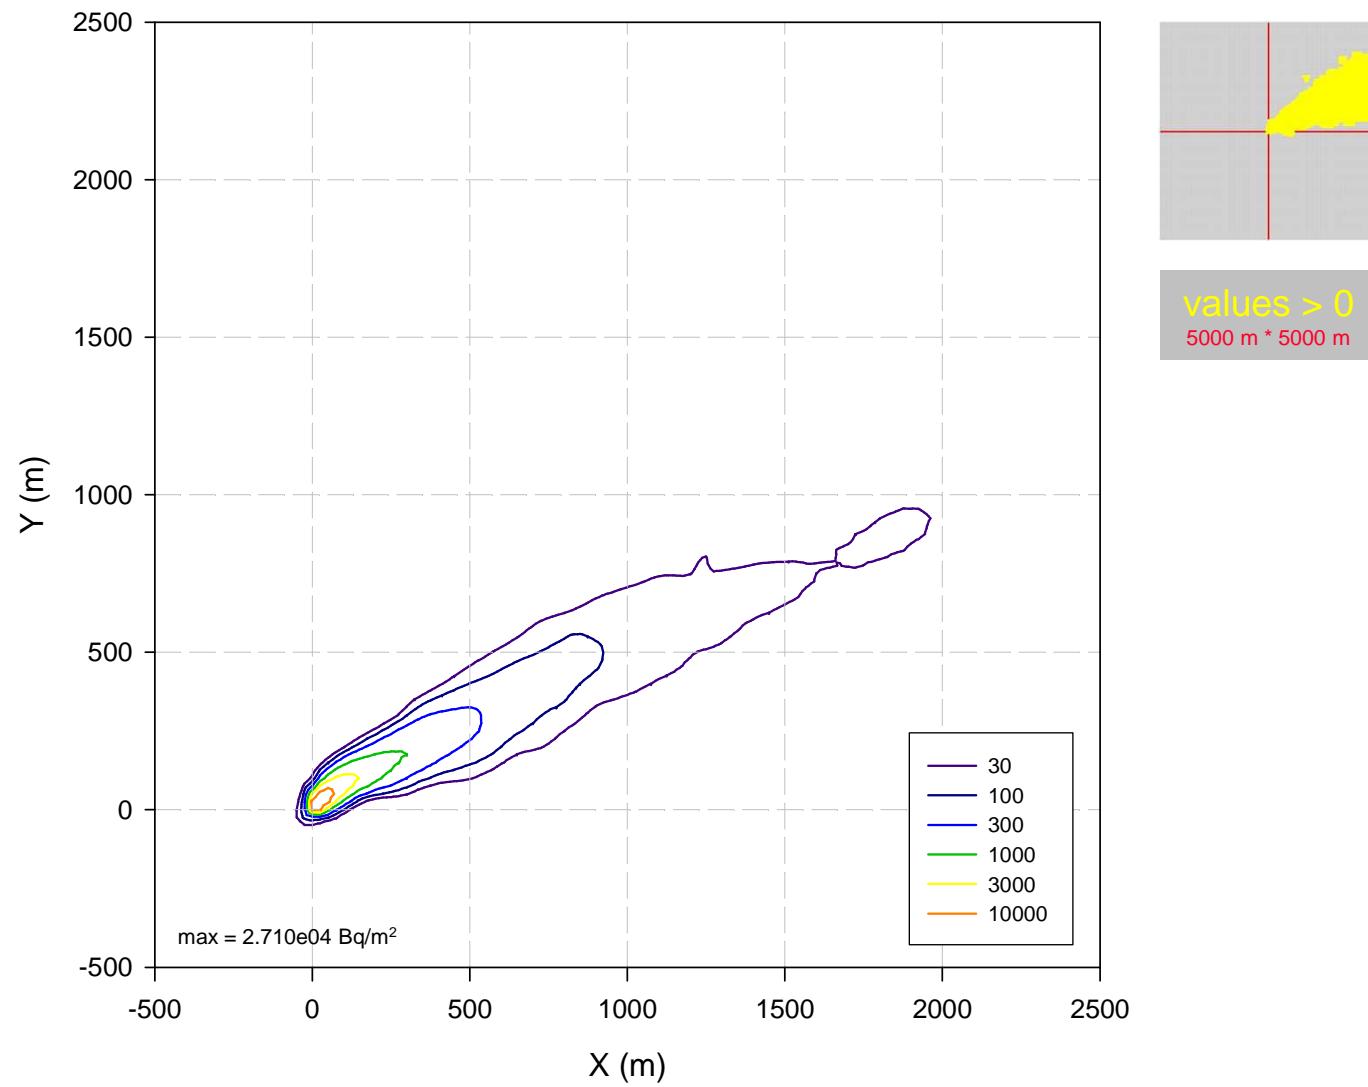

**Experiment 3, time integrated activity [Bq*min/m³], 15 min
Maxima downwind**

**Experiment 3, time integrated activity [Bq*min/m³], 60 min
Maxima downwind**

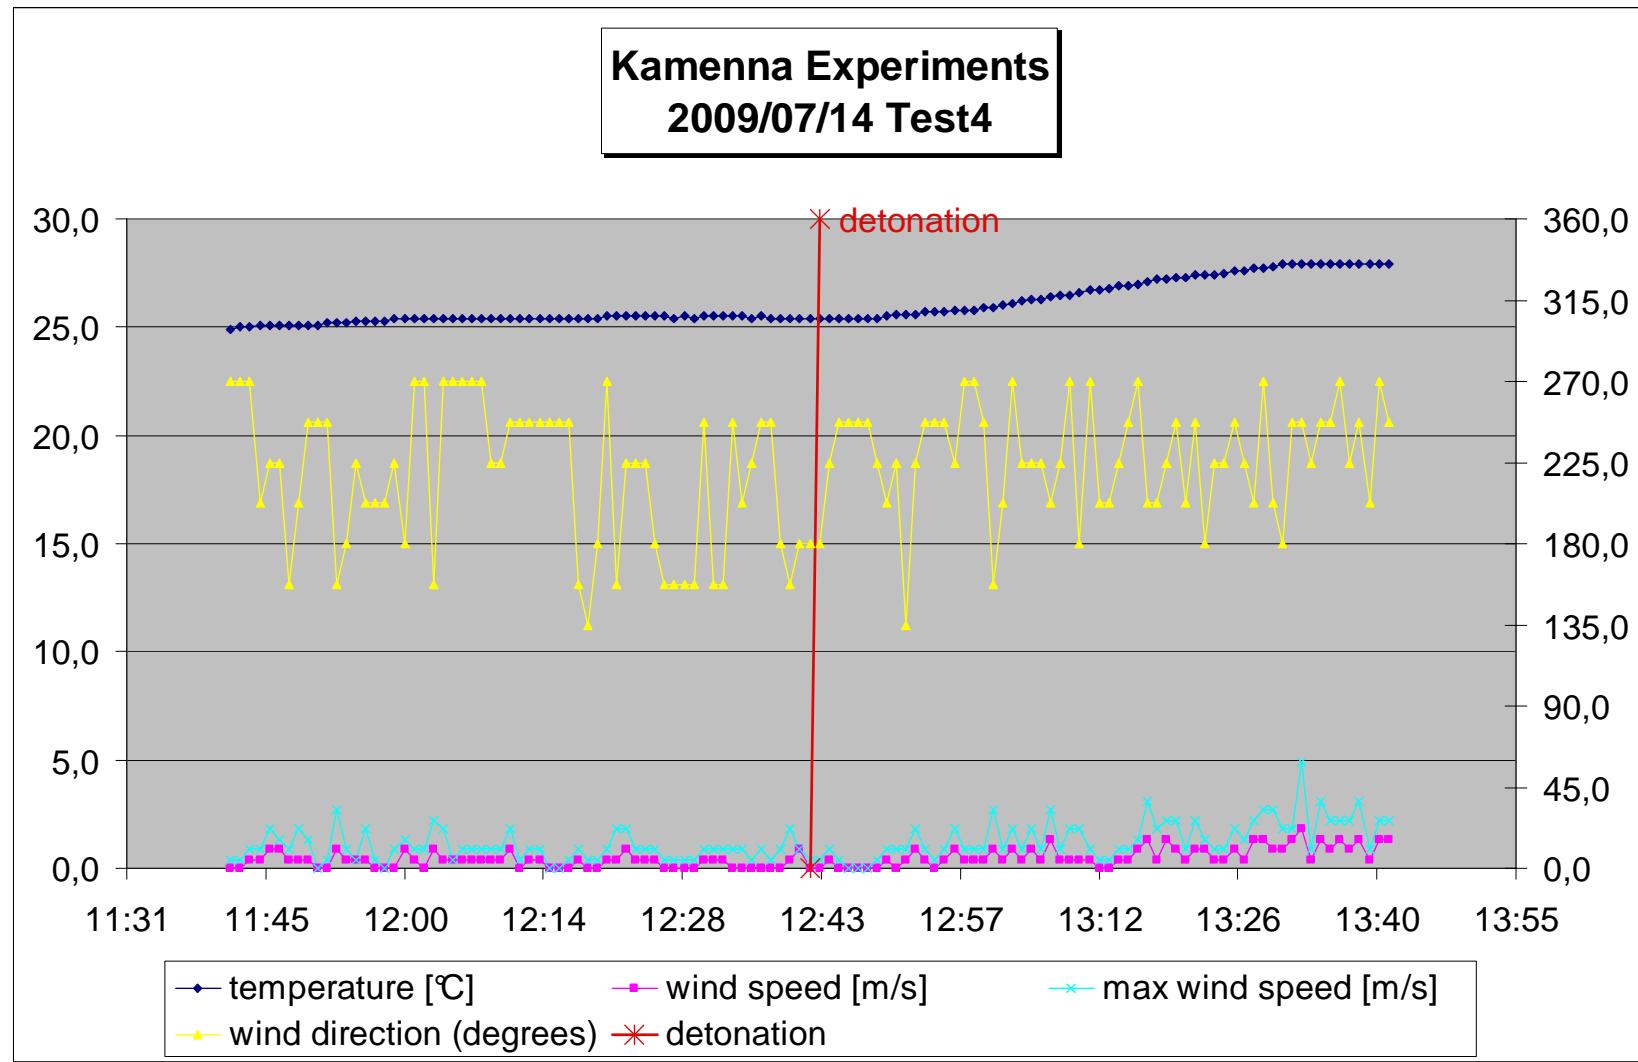

Experiment 3, Deposition [Bq/m²], 60 min

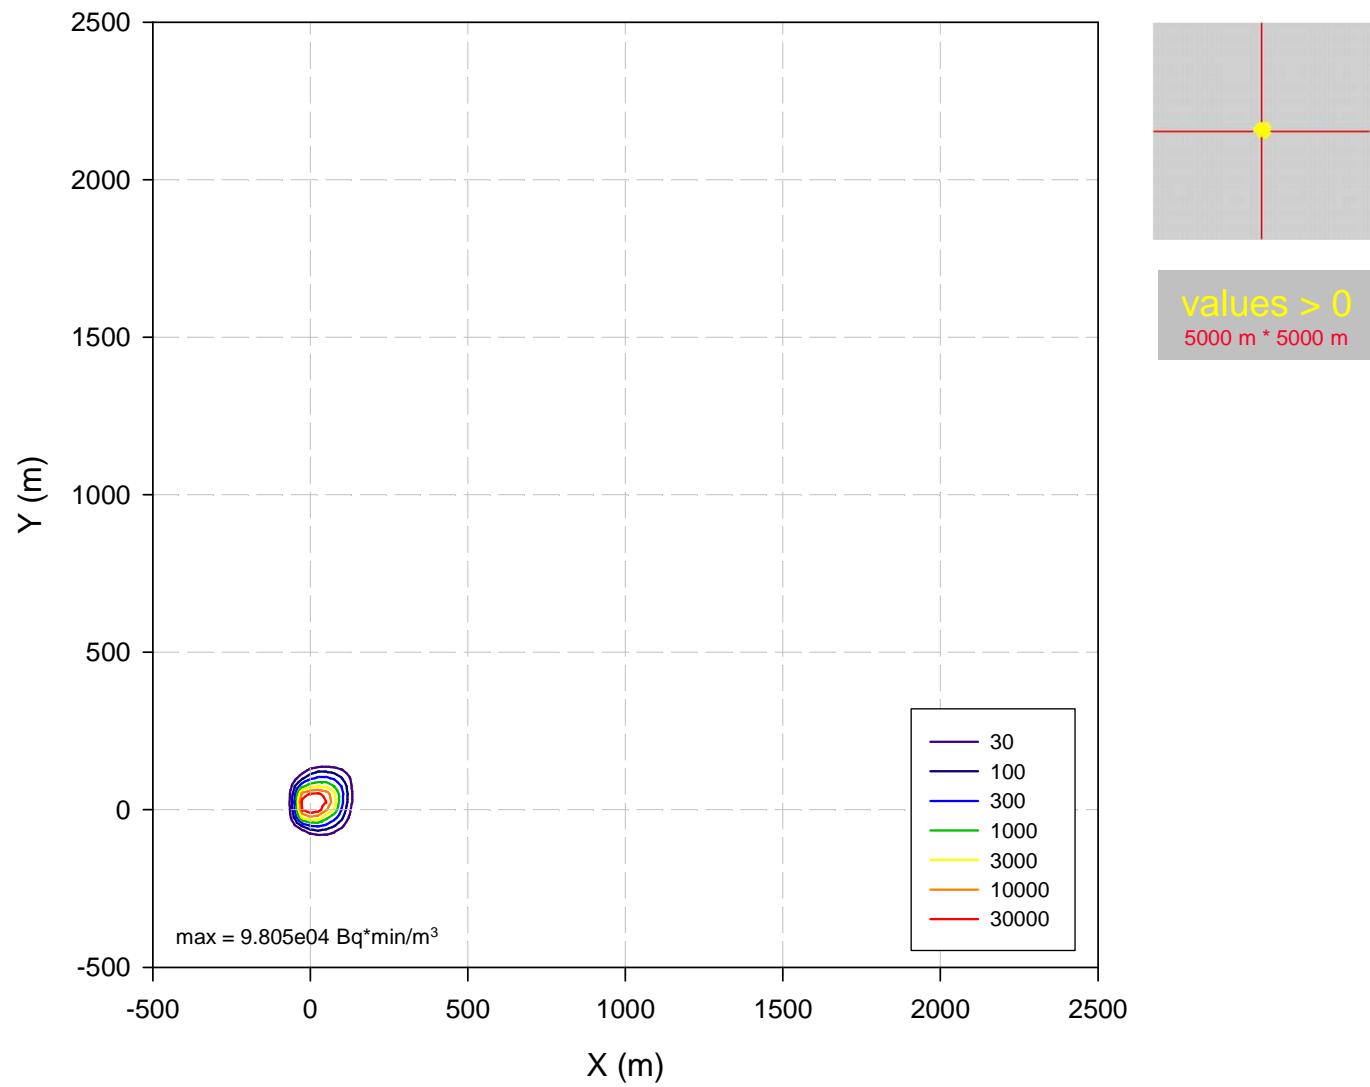

Hartmut Walter
Federal Office for Radiation Protection, Germany

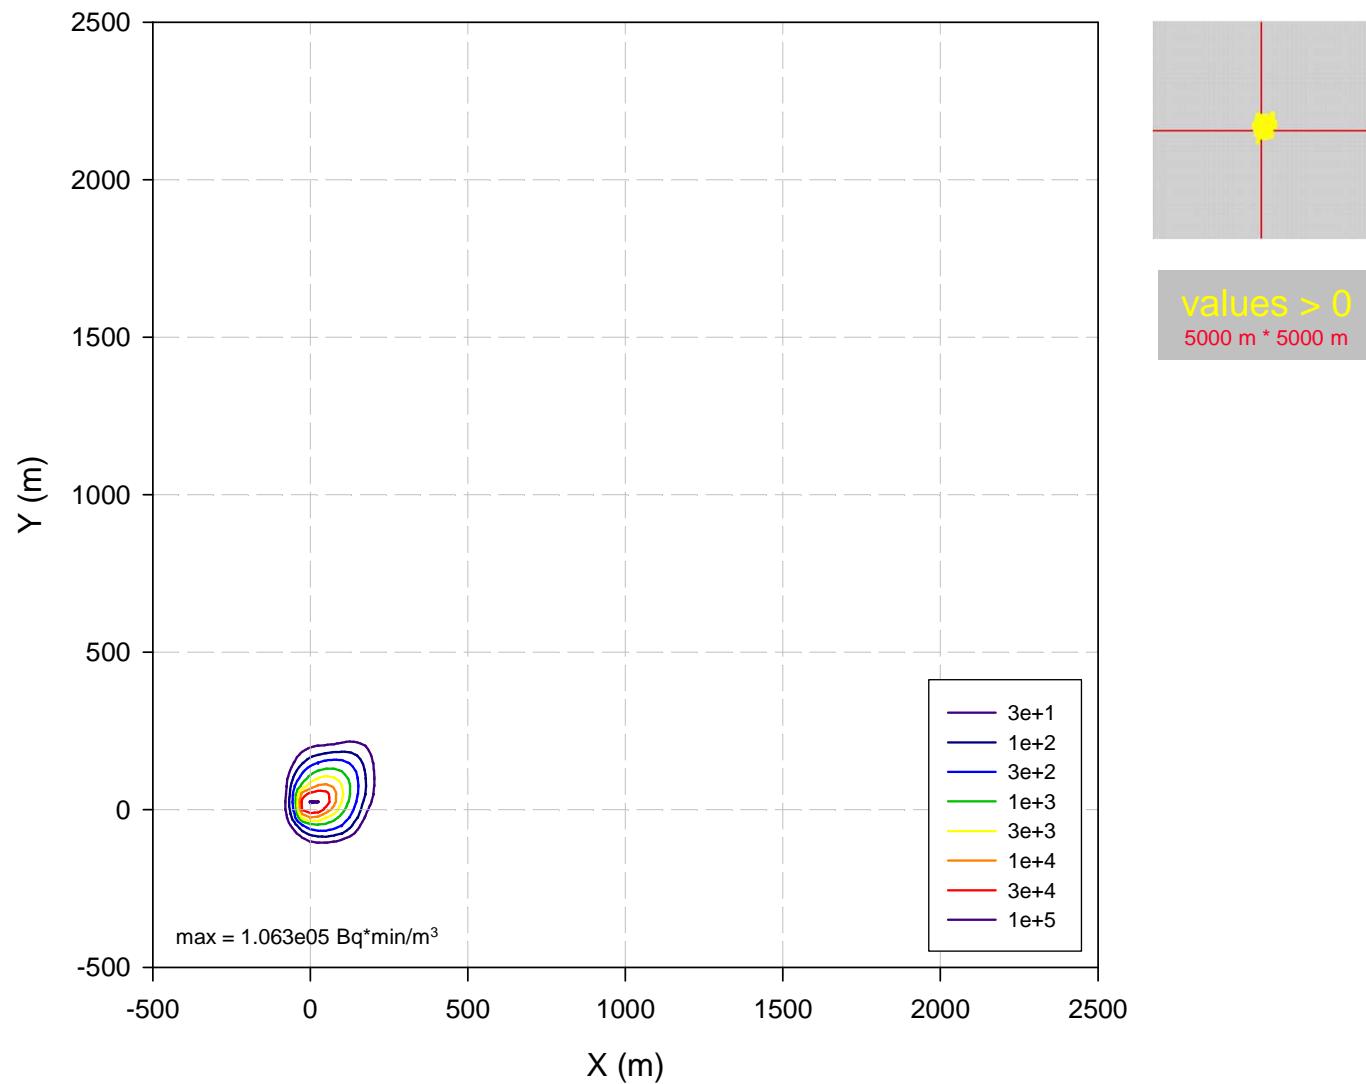

Meteorology Test 4

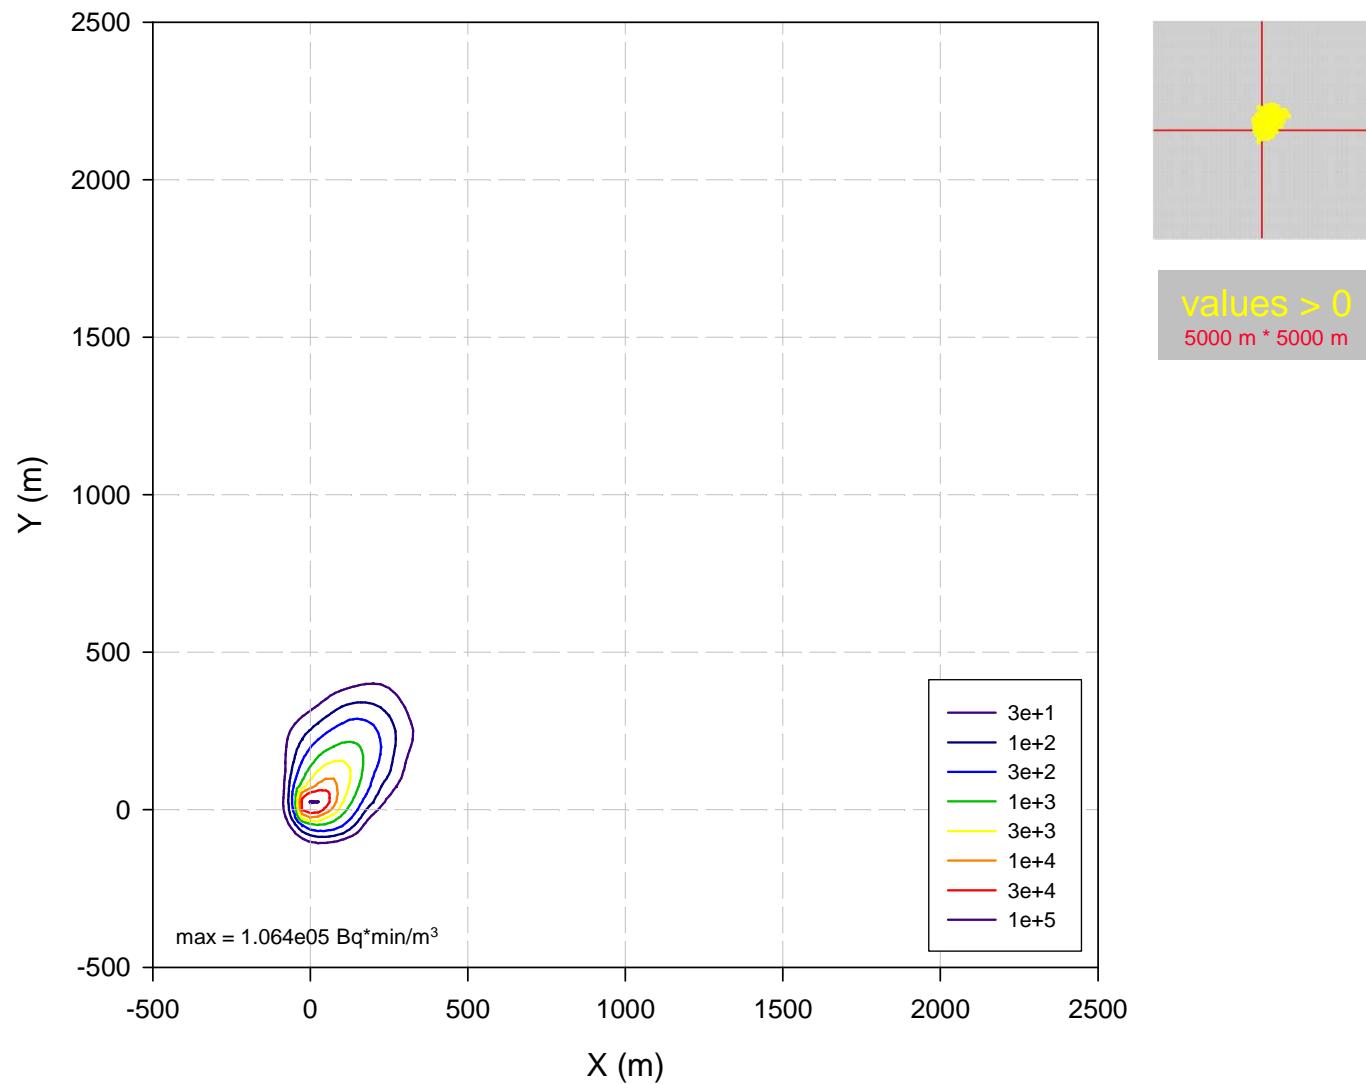

Experiment 4, time integrated activity [Bq*min/m³], 05 min

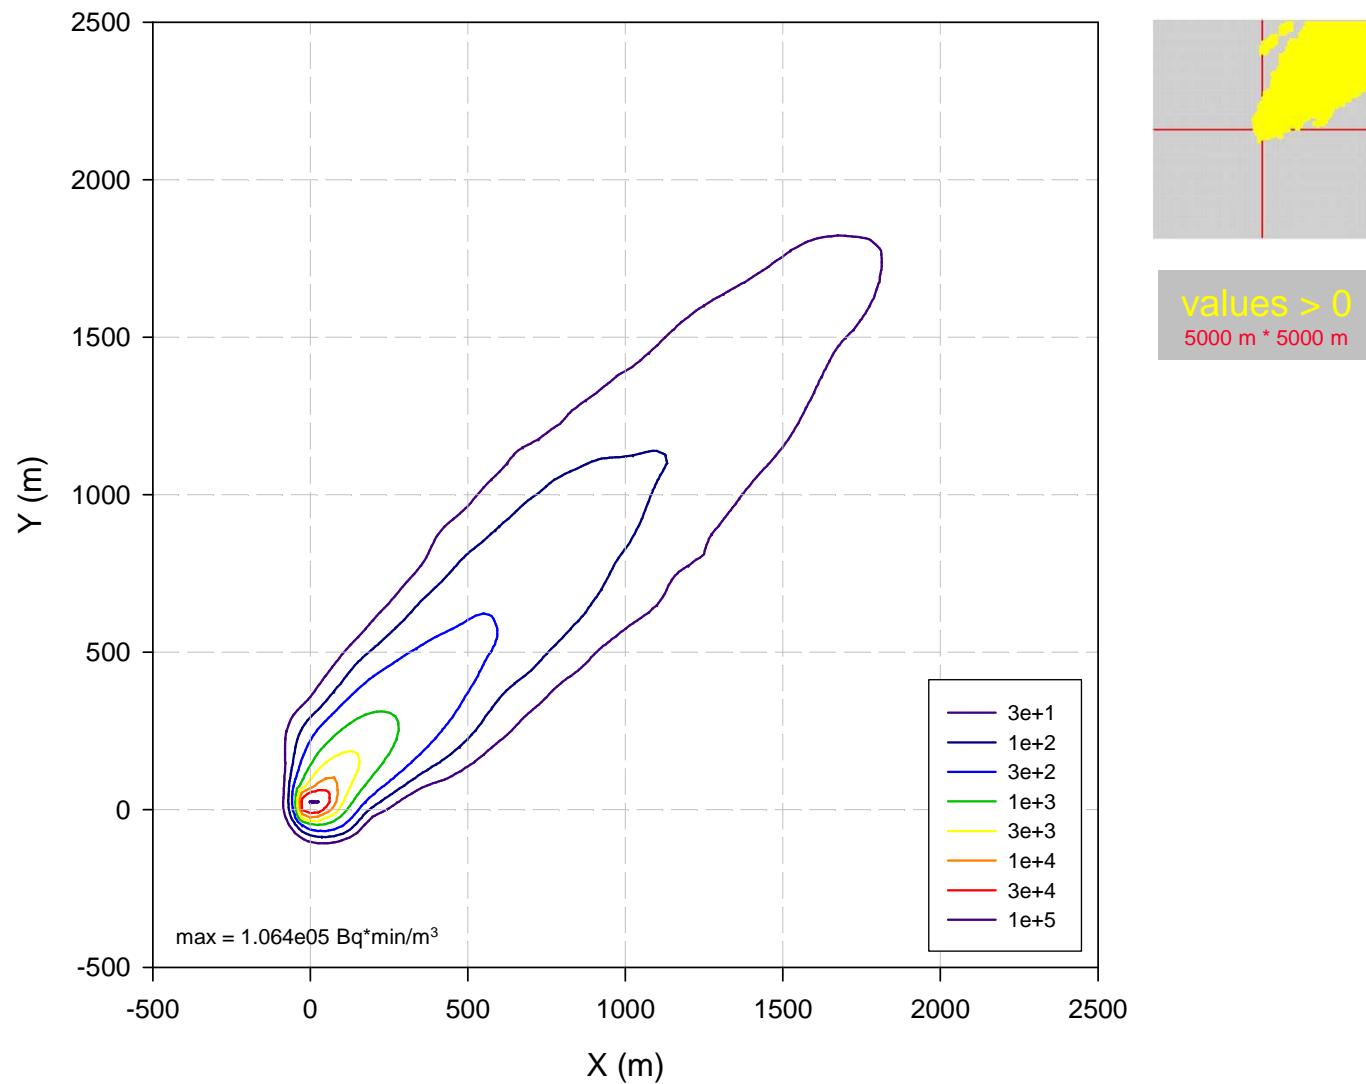

Experiment 4, time integrated activity [Bq*min/m³], 10 min

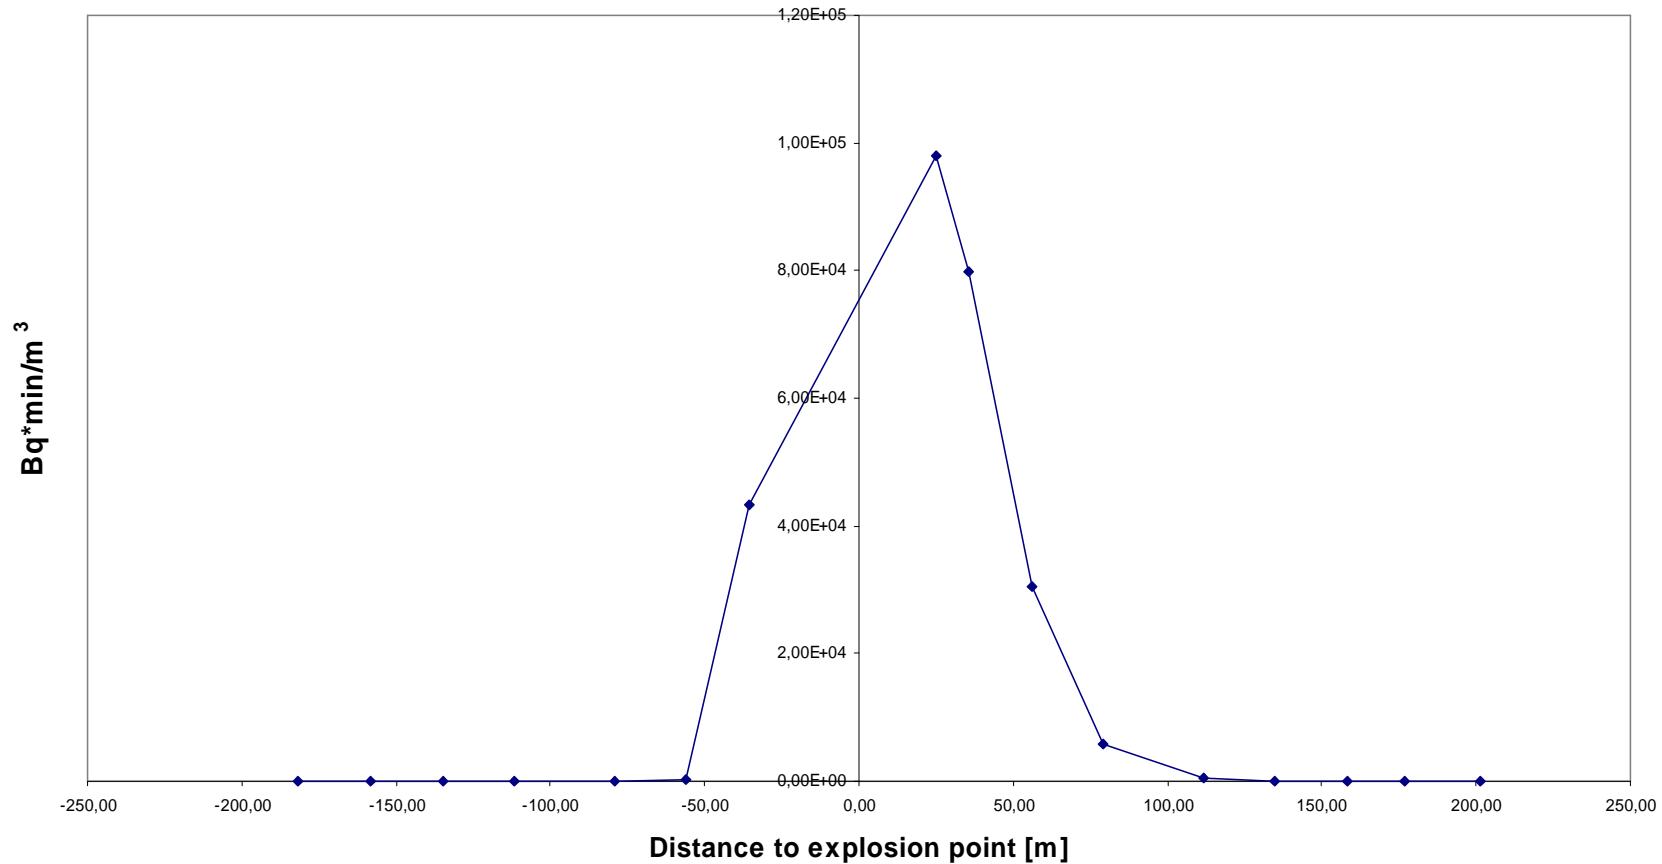

Experiment 4, time integrated activity [Bq*min/m³], 15 min

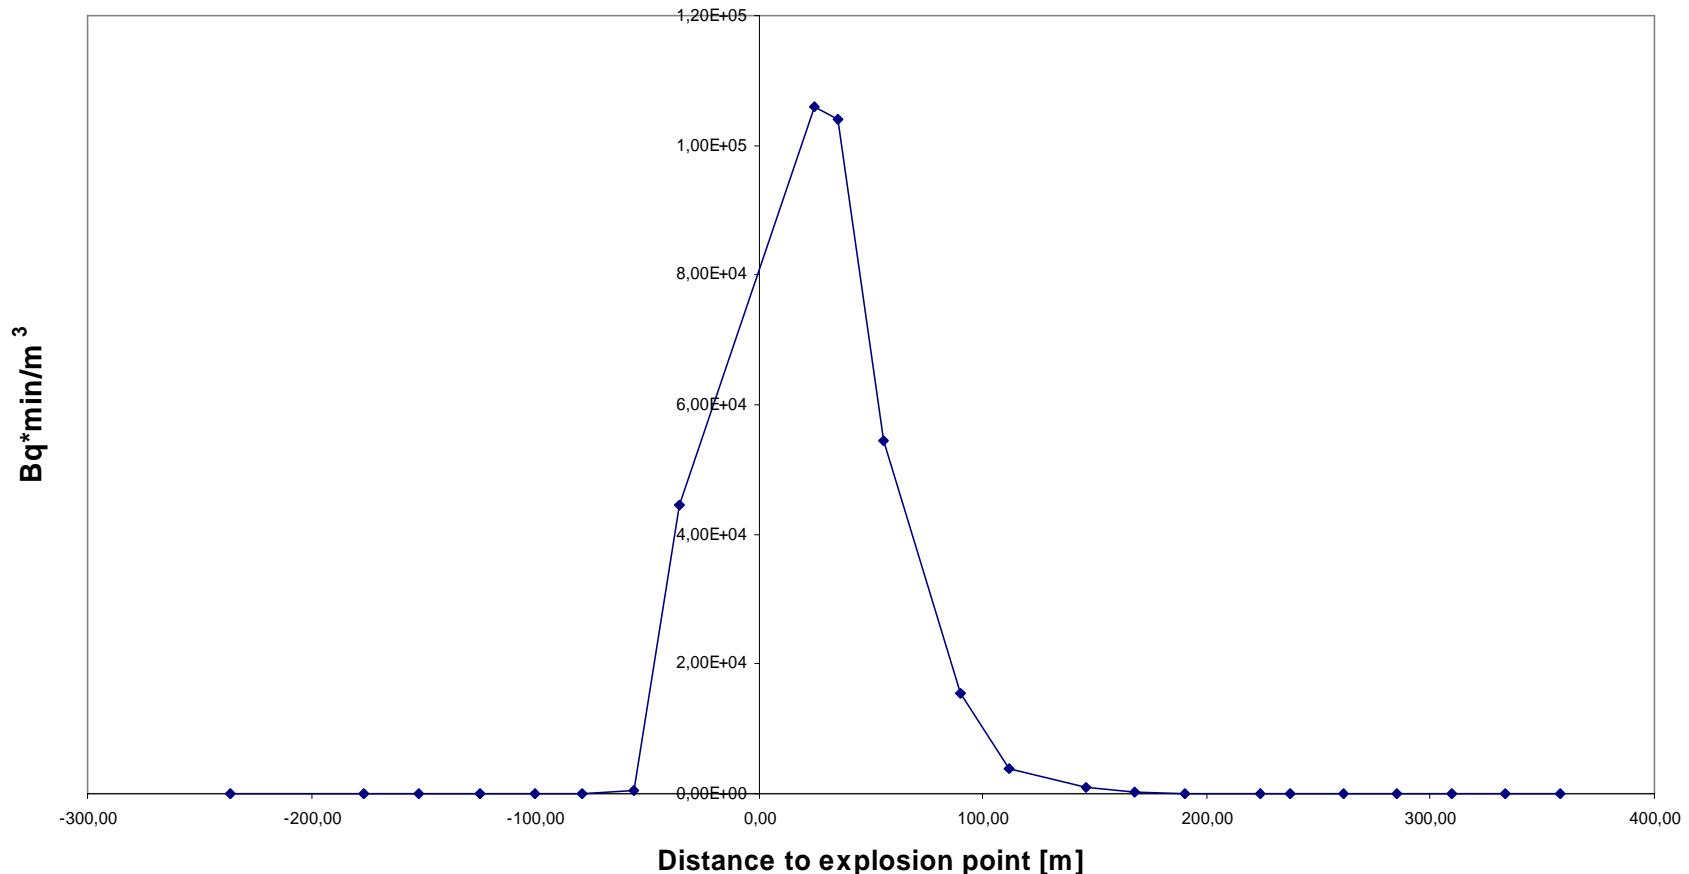

Experiment 4, time integrated activity [Bq*min/m³], 60 min

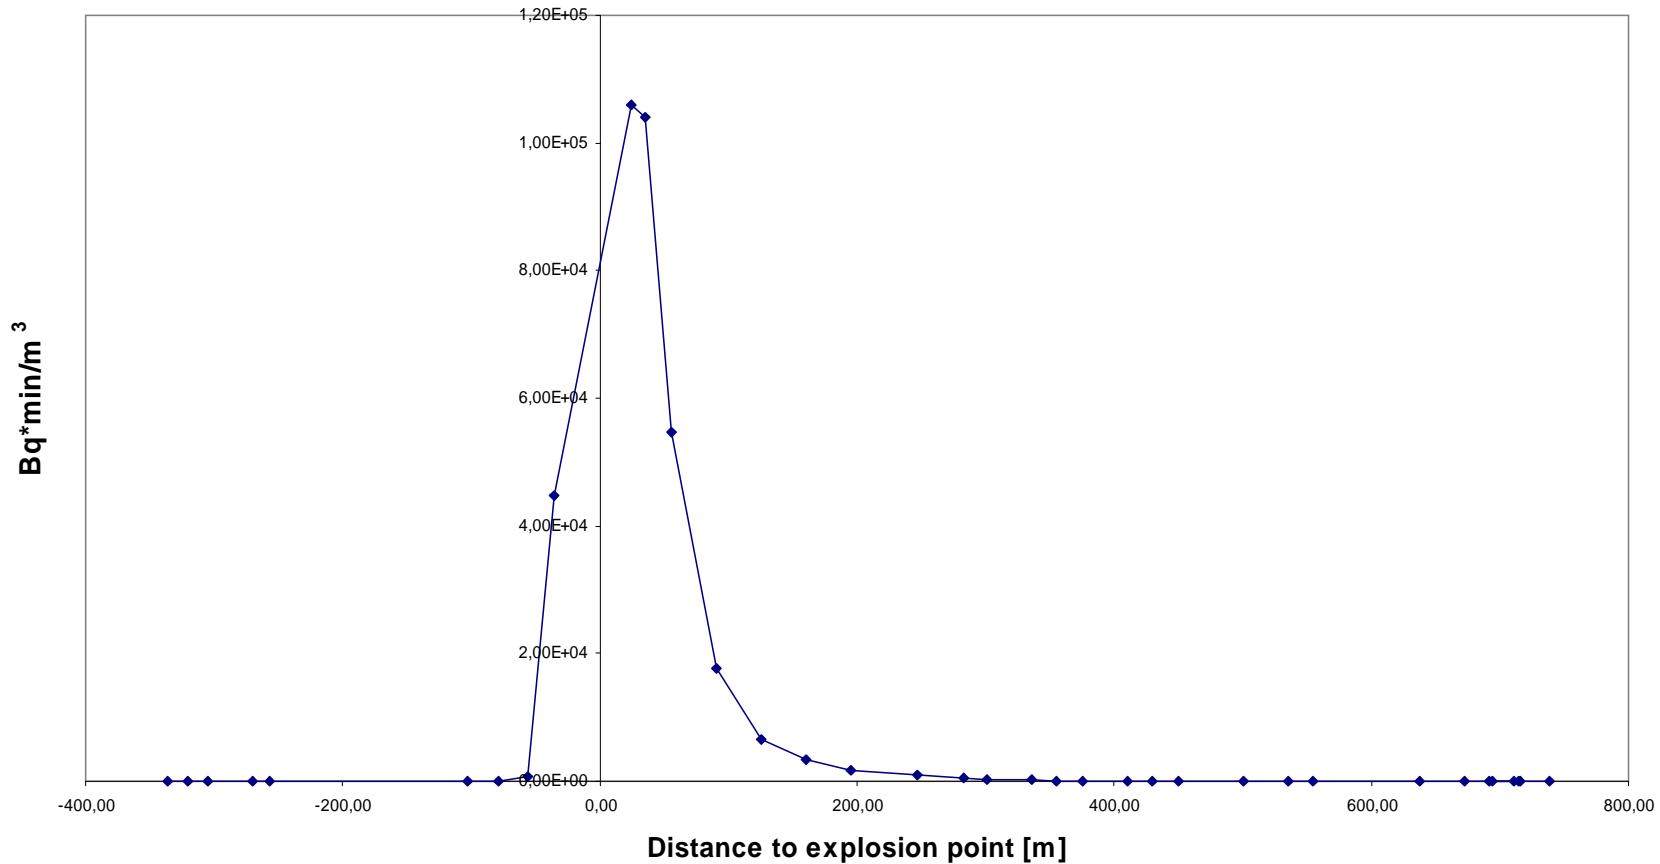

Experiment 4, time integrated activity [Bq*min/m³], 05 min
Maxima downwind

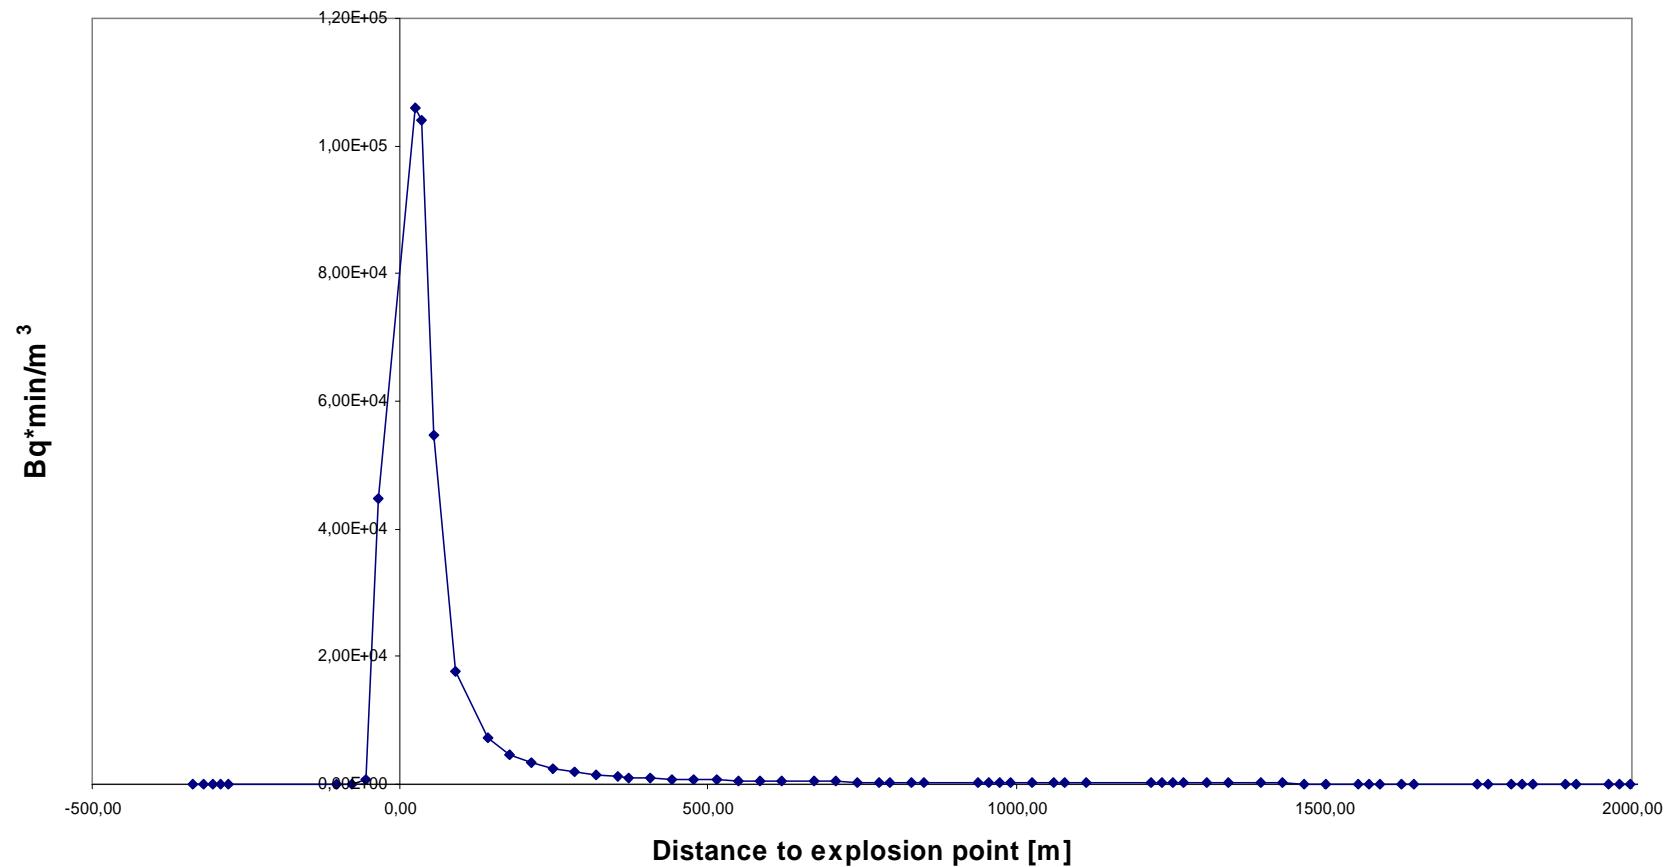

**Experiment 4, time integrated activity [Bq*min/m³], 10 min
Maxima downwind**

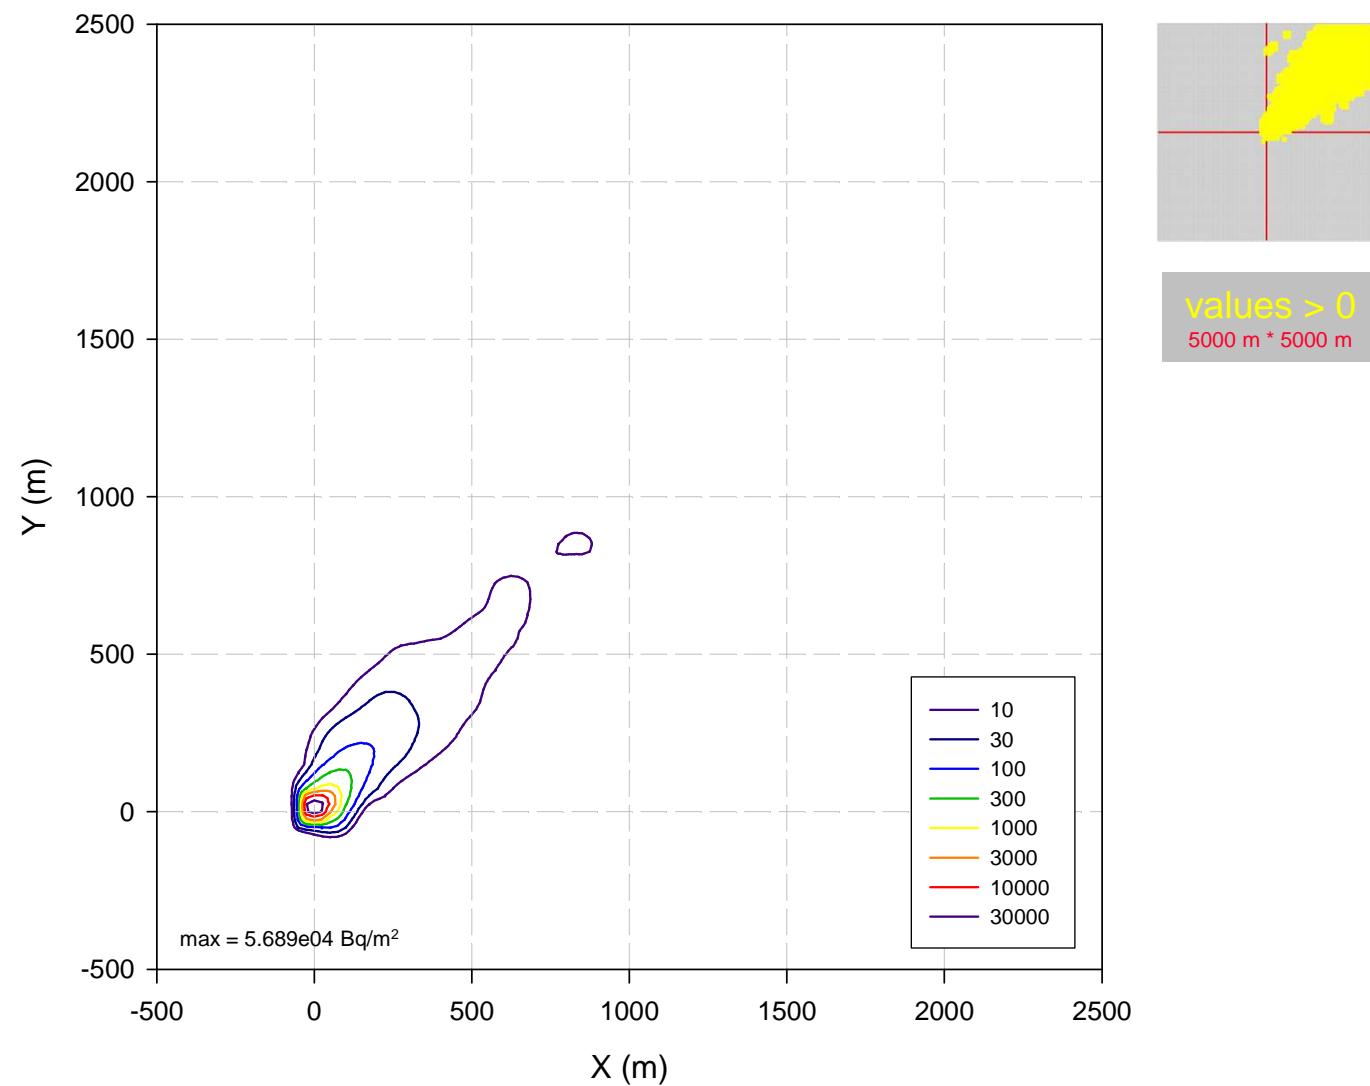

Experiment 4, time integrated activity [Bq*min/m³], 15 min
Maxima downwind

**Experiment 4, time integrated activity [Bq*min/m³], 60 min
Maxima downwind**

Experiment 4, Deposition [Bq/m²], 60 min

Results, Summary

Conclusion

- mesh size in LASAIR is too coarse
- results are consistent
- low windspeeds are challenging for the models
- comparison to measurements and/or to other models is difficult (mesh size, LASAIR data has a different scope)

**for your interest
